San Juan Health Department Scope of Work Guidance (FY24)

Purpose

The purpose of this scope of work is to establish clear goals, objectives, measures, and reporting requirements that the Division of Drinking Water (DDW) and the Local Health Departments (LHDs) have agreed to guide our work together. DDW and the LHDs work in partnership to ensure that the public water systems can supply safe and reliable drinking water. LHDs serve the important role as both a local contact and support for public water systems throughout the State.

Core Items

1. Track, Manage, and Report on Threshold Systems

A threshold system is a water system that does not currently meet the state or federal definition of a public water system (eight service connections or 25 persons served for sixty days out of the year), but through development may meet that definition in the future. LHDs can notify DDW about a potential water system through the interactive form (<https://forms.gle/e5uNvxWWLCPBKRue6>). LHDs are encouraged to reach out to DDW for assistance or consultation on a potential public water system including on-site inspections or review of potential public or system type status.

LHD's, within their purview, will develop and implement procedures to identify drinking water service threshold systems/business. This can be achieved through planning and zoning notices, miscellaneous notifications, onsite wastewater permitting, and other methods. The procedures will ensure the LHD is aware of new developments outside of public water system boundaries. The LHD will work with DDW to track, monitor, and manage these developments and potential water systems, and will consult with DDW on each case whether a new system meets the PWS criteria or not. When a water system meets the requirements of a PWS, the LHD will report the system to DDW. When possible LHDs will assist in helping new systems meet the requirements set forth in their Initial Water System Order (*Welcome to the Club sic*).

Goal: LHD will be aware of the threshold for becoming a public water system to develop and implement procedures to trigger a review of any new development. Decrease public health gaps for residents receiving drinking water from a system that should be regulated by DDW.

Objective: The proliferation of small systems and large communities served water behind a master meter that are unknown to DDW, but should they be a PWS when there is a public health gap. Community development can also grow to cross the regulatory threshold. DDW needs LHD assistance to keep track of these localized types of situations and refer these systems to DDW for regulation when appropriate. The LHD and building authority is uniquely positioned to assist these systems in their transition to regulated PWSs.

Measure: Maintain an inventory of threshold systems and update their status annually.

Report: Notify DDW on or before the quarterly Action Compliance Strategy Meeting of threshold systems that meet the requirements of a PWS and provide the inventory of threshold systems LHD reviewed in the annual report.

2. Consultations with Public Water Systems

The LHD will consult with and provide assistance to local drinking water systems on unapproved or corrective action status, boil orders, notices of violation (NOV), system deficiencies, optimization and technical assistance, training and using WaterLink, and will support water systems performing Level 1 Assessments. The LHD will also confirm the deficiency and violation status of the public water system serving a proposed development and consult with DDW if capacity deficiencies are identified before the development is approved by the LHD. The LHD will inform DDW of concerns and questions received by PWSs to keep DDW aware of developing perceptions and concerns so that DDW can adjust training and outreach accordingly.

Goal: Provide local support for PWS compliance and optimization.

Objective: Ensure that each PWS has accurate, timely, and localized assistance to ensure their compliance with DDW regulations to protect public health.

Measure: Reduce the number of not approved PWSs, minimize the duration of and subsequent follow-up events that result from water system non-compliance.

Report: What the LHD is doing to encourage compliance with drinking water rules and standards. Report the number of systems LHD provided support or information to assist in Public Notifications and/or building permit denials due to drinking water deficiencies.

3. Emergency Response

The LHD will contact DDW, using the emergency response number, within 4 hours of any incident or emergency that may impact drinking water to ensure best practices will be used to protect public health. Leaving a voicemail on the DDW emergency response number will be sufficient notification in the event of an unanswered call. The LHD will coordinate efforts with DDW to determine what emergency situations they wish to participate in. DDW will notify and/or coordinate with the LHD on all Tier 1 and Maximum Contaminant Level (MCL) Public Notices. The LHD will work with DDW and the PWS on additional sampling requirements and reporting during drinking water emergencies.

Goal: Provide rapid and accurate response to protect public health.

Objective: Ensure that the public is quickly given accurate and consistent information. Participate in emergency response activities according to established protocols.

Measure: Response measures will be event specific.

Report: All emergency response activities and results, not already recorded in Waterlink, shall be tracked, managed, and reported to DDW by email per incident.

4. Support Source Protection Programs

The LHD will support public water systems in their efforts to protect their drinking water sources through cooperation, coordination, and communication. Counties of the first and second class are statutorily required to develop and enforce source protection ordinances to protect watersheds, drinking water sources, and public health. Many counties that are not of the first or second class have recognized the value of protecting drinking water sources and have voluntarily implemented source protection ordinances as well. LHDs that have these ordinances will work with county code enforcement to encourage that these ordinances are enforced, consult with DDW whenever there is a change to their ordinance, and respond to DDW inquiries in a timely manner.

Goal: To protect the public drinking water supply from potential contamination sources.

Objective: To support PWS efforts to protect their sources through cooperation, coordination, and communication. The LHD has more authority than DDW within its local jurisdiction to make significant impacts on source protection. This could be through ordinance, plan review, density planning, coalitions, or other measures.

Measure: Document actions related to source protection ordinances such as identifying source protection zones of a PWS to identify properties with restricted activities such as onsite wastewater systems, ground heat source pump inquiries, watershed issues, etc., enforcement, public outreach and education, and other activities.

Report: All source protection activities LHDs are involved in shall be tracked, managed, and reported to DDW annually.

5. Public Consultations and Media Inquiries

The LHD in coordination with DDW and the PWS will continue to provide accurate, timely, consistent messaging to the public concerning water systems within its boundaries and ensure that communication is in alignment with DDW programs, policies, and directive whenever practical. Media inquiries regarding public drinking water systems and supplies will be coordinated with DDW whenever practical. This coordination will follow the procedures outlined in the DEQ-LHD Notification Procedure.

Goal: To provide transparency to the public with respect to drinking water issues.

Objective: Ensure accurate, timely, and consistent messaging with respect to drinking water issues to the public and media.

Measure: Agree to participate and coordinate with DDW.

Report: Report the number of systems LHD provided support or information to assist in public consultations and media inquiries.

6. Investigative Sampling

Goal: To reduce the duration of public health concerns, DDW may request the support of LHDs to collect samples. DDW will work with LHDs on which samples are needed and laboratory costs.

Objective: To quickly identify the root cause of specific public health concerns.

Measure: Number and type of samples collected for each specific event.

Report: Number and type of investigative PWS samples collected in relation to any specific event that the DDW requests, along with any correlation between samples collected and issues identified.

7. Sanitary Survey Training and Pre-site visit Waterlink Facility Review

Goal: Improve accuracy and consistency of site visit inspections

Objective: All surveyors attend annual training virtual sessions and in-person support sessions. The in-person session will function as a day to cover questions and answers, and/or the DDW trainer can shadow the LHD surveyors on a site inspection.

Measure: Each surveyor will complete both in-person and virtual recordings (\$100 compensation per surveyor)

Report: DDW will track virtual training participation using the Webex software.

8. Operator Certification

Goal: Help DDW ensure that all PWS have a certified operator.

Objective: Provide location and proctor for operator certification examinations and help to identify certified operators when a system is without one.

Measure: Number of tests proctored.

Report: Number of tests proctored.

9. Support Backflow and Cross Connection Programs

Goal: Prevent contamination of public drinking water supply from cross connections or backflow events.

Objective: Support local backflow and cross connection control programs.

Measure: LHD specific actions

Report: Annually report on LHD specific actions.

- (1) Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For Indian Tribal, State and Local and Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.
- (2) Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.
- (3) Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.
- (4) Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
- (5) Use the services and assistance of the SBA and the Minority Business Development Agency of the Department of Commerce.
- (6) If the prime contractor awards subcontracts, require the prime contractor to take the steps in paragraphs (a) through (e) of this section.
