## Utah Department of Environmental Quality Division of Air Quality

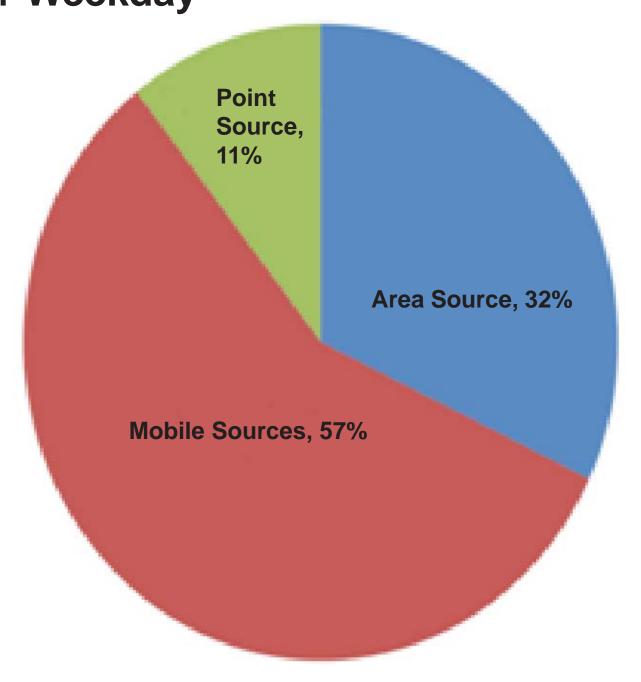

## Industry's Impact to Utah's Air

DAQ conducted an inventory of the various sources of emissions. The identified sources are categorized as:

- Mobile (e.g., vehicles)
- Point (e.g., large manufacturers)
- Area (e.g., home and commercial heating)

## **Wasatch Front Emissions Inventory Typical Winter Weekday**

This chart is based on the DAQ 2008 emissions inventory for the four urbanized Wasatch Front counties: Davis, Salt Lake, Utah and Weber. These are average winter weekday emissions.

As outlined in the  $PM_{2.5}$  SIP, DAQ is holding point sources accountable for their impact to Utah's air.

Source	Implementation Costs
Point	Approximately \$50 Million
Area	Approximately \$20 Million
Mobile	No new or increased fees
