

FACT SHEET

R307-303 Commercial Cooking

Overview

The Utah Division of Air Quality, R307-303, was adopted as part of a package of rules designed to help minimize pollution along the Wasatch Front. The rule applies to all chain driven charbroilers in Box Elder, Cache, Davis, Salt Lake, Tooele, Utah and Weber counties. The rule is designed to limit volatile organic compound and PM_{2.5} emissions from commercial cooking equipment.

Requirements

A catalytic oxidizer emission control device must be installed and operated on all chain driven charbroilers to control emissions produced during use. The catalytic oxidizer must be operated, cleaned and maintained according to the manufacturer's specifications. Visible emissions from the exhaust stream shall not exceed 20% opacity. (See entire rule for all circumstances.)

Record Keeping

The following records must be maintained on site for a minimum of 5 years:

- Date of installation of the catalytic oxidizer;
- Date of the catalytic oxidizer replacement (if applicable);
- Date, time, and description of all maintenance performed on the catalytic oxidizer (preventative maintenance, breakdown repairs, cleaning, etc.).
