

Data produced to fulfill request from Catherine Williams as part of data request from the public

NOTE: The data represented here is NOT complete and subject to change.

Currently, the EPA/NOMAD (NOpoint Methods ADvisory group) 2017 oil and gas tool has not been finalized. Thus emissions accepted from the tool are not in this data set. Further, there is only one data point for San Juan County as all other oil and gas emissions for that county are accepted from the EPA/NOMAD oil and gas tool (due to insufficient oil/gas facilities submit data to the Utah Division of Air Quality (UDAQ) as there is no data sharing agreement with the Tribes in San Juan county). Data represents the 2017 calendar year UDAQ NEI (National Emissions Inventory) submission and is based on data collected from regulated oil and gas facilities in Utah (with the noted exception of San Juan county) and from gap filling estimates and data adjustment measures employed in 2017 NEI submission calculations.

The emissions in this workbook are, therefore, only a partial and incomplete calendar year 2017 data set at this time.
