This represents UDAQ's data combined with EPA/NOMAD Oil and Gas Tool data used for the 2017 NEI.
NOTE: The data represented here includes emissions from the EPA/NOMAD (NOnpoint Methods ADvisory group) 2017 oil and gas tool which are anticipated to be final totals. It is possible, but unlikely, that EPA/NOMAD will institute further changes into the tool. Should this occur, however, totals will be updated.

With the exception of oil/gas solid waste disposal, that San Juan County oil and gas emissions are accepted from the EPA/NOMAD oil and gas tool (due to insufficient oil/gas facilities submit data to the Utah Division of Air Quality (UDAQ) as there is no data sharing agreement with the Tribes in San Juan county). Data represents the 2017 calendar year UDAQ NEI (National Emissions Inventory) submission and is based on data collected from regulated oil and gas facilities in Utah (with the noted exception of San Juan county), gap filling estimates and data adjustment measures employed in 2017 NEI submission calculations, and data from the EPA/NOMAD oil and gas tool.
