I feel we need to change the Emission testing on all cars, for the whole state. We as a state should have one set Emission standard no matter where you live. (Rural or urban) We all travel to all locations of Utah, and we are one state with one big problem the air quality sucks, And we all should help fix it as a state. I think also we need to have everyone's Snowblowers, and Mowers maintained at a level of certain quality. in the winter I can smell the gas from my neighbor's snowblower which lives 8 houses away that I feel is not helping our air quality.

if you need anything please feel free to call me
