RE: 3rd QT 2011 Report - Coal Hollow Mine
Project ID: N14047-0002

Dear Mr. Black,

Please find enclosed the Summary of PM₁₀ Data Collected at the Coal Hollow Mine, Utah during the Third Quarter, 2011 prepared by Alton Coal Development, LLC.

Please do not hesitate to contact me if you have any questions. I can be reached at (435) 867-5331 or (435) 691-1551.

Sincerely,

B. Kirk Nicholes
Environmental Specialist
Alton Coal Development, LLC

PM₁₀ Data, 3rd Quarter, 2011

October 24, 2011
Page 1

1.0 INTRODUCTION

This report summarizes measurements of Particulate Matter less than 10 microns nominal aerodynamic diameter (PM_{10}) collected and processed by Alton Coal Development, LLC., from the three monitoring stations located at the Coal Hollow Mine Facility in Alton, Utah. Monitoring for PM_{10} is a condition of the mines operating permit.

PM_{10} monitoring at the site consists of three BGI PQ200 PM_{10} monitors run by solar power. Figure 2 of this report shows the approximate locations of the monitoring locations. The BGI PQ200 monitors are EPA Reference Method monitors and are operated on the National Particulate 1-in-6 Monitoring Schedule. The data summarized herein covers the data collected during the third quarter of 2011.

2.0 SITE LOCATION

The Coal Hollow Mine is located in Kane County, Utah, approximately three miles southeast of the town of Alton, Utah. Figure 1 on the following page gives an overview of the site location. Specifically the Coal Hollow Mine is located in Sections 19, 20, 29, and 30 of Township 39S, Range 5W; with an approximate facility location of:

Northing: 41401699 meters

Easting: 371534 meters

Universal Transverse Mercator (UTM) Datum NAD27, Zone 12

The two monitoring locations as depicted in Figure 2, are located in positions to collect both background and maximum PM_{10} concentrations. The background monitor has a manufacturer's serial #962, therefore this monitor will be referred as monitor 962A. The compliance monitor has a manufacturer's serial #963, therefore this monitor will be referred as monitor 963B. The co-located monitor has a manufacturer's serial #964, therefore this monitor will be referred as monitor 964C. The compliance monitor and the co-located monitor coordinates are $37^{\circ} 24' 5.04''$ North Latitude, $112^{\circ} 27' 20.91''$ West Longitude, WGS84 Datum. The background monitor coordinates are $37^{\circ} 24' 21.96''$ North Latitude, $112^{\circ} 25' 59.97''$ West Longitude, WGS84 Datum.

Figure 1 - Site Location Map

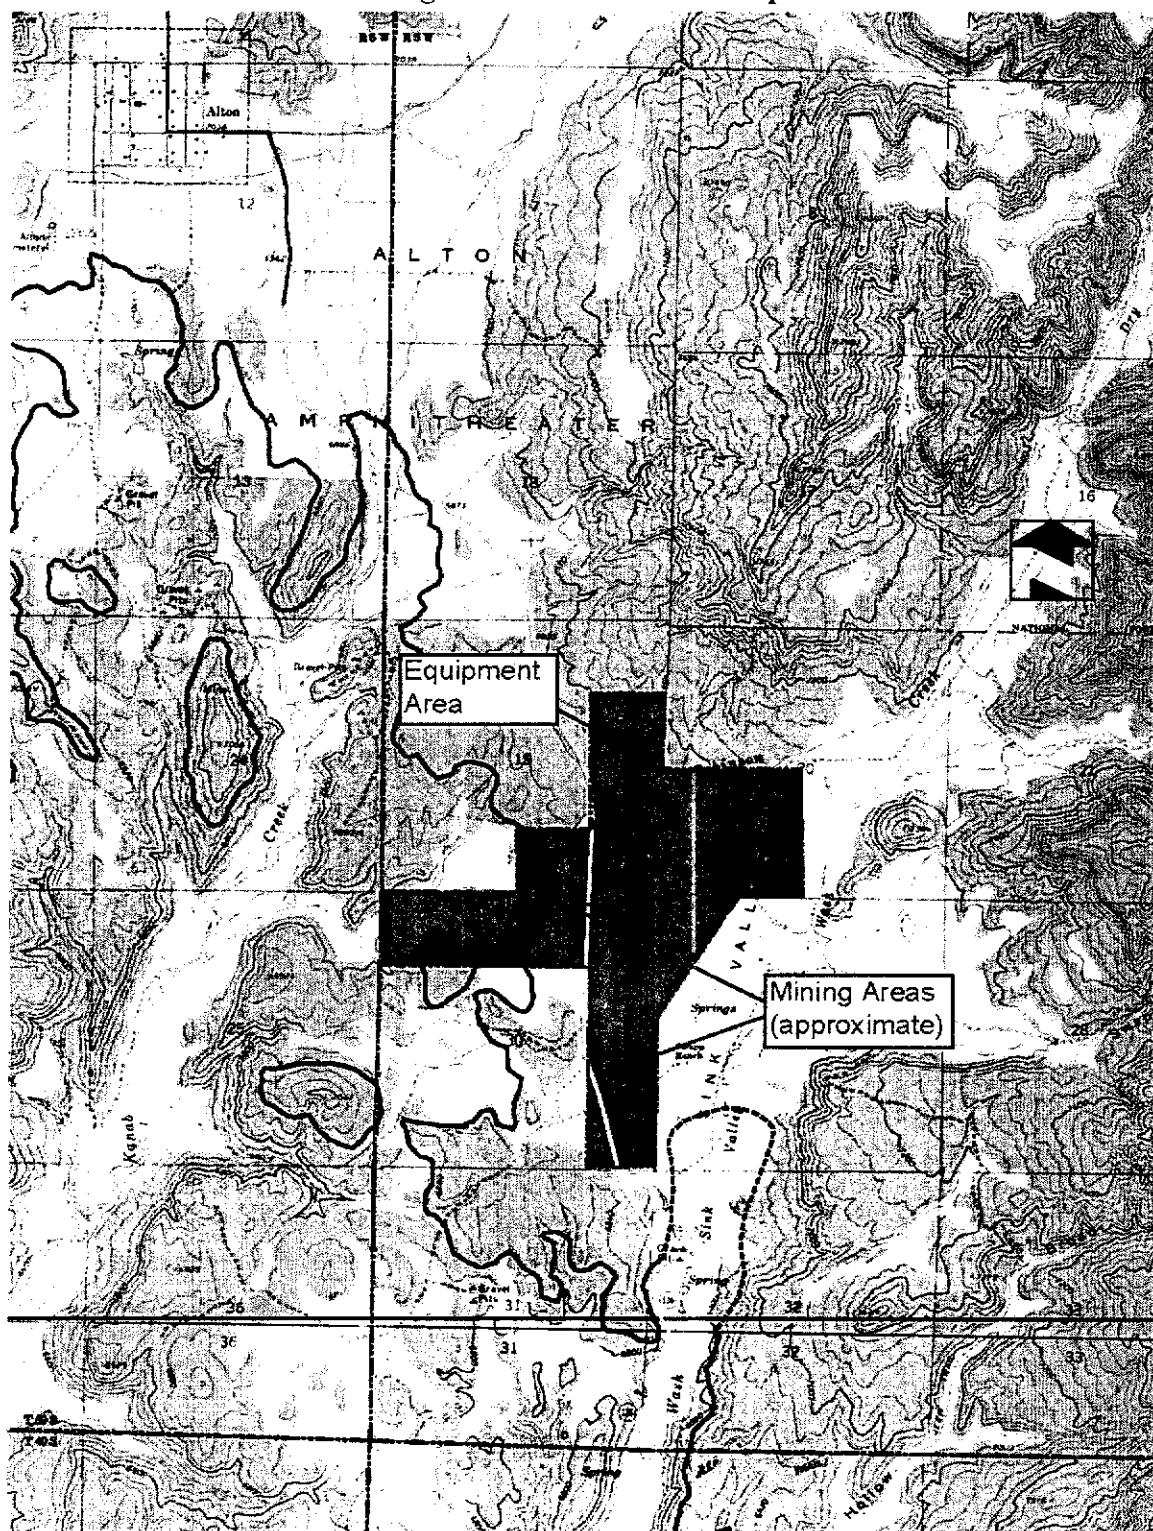

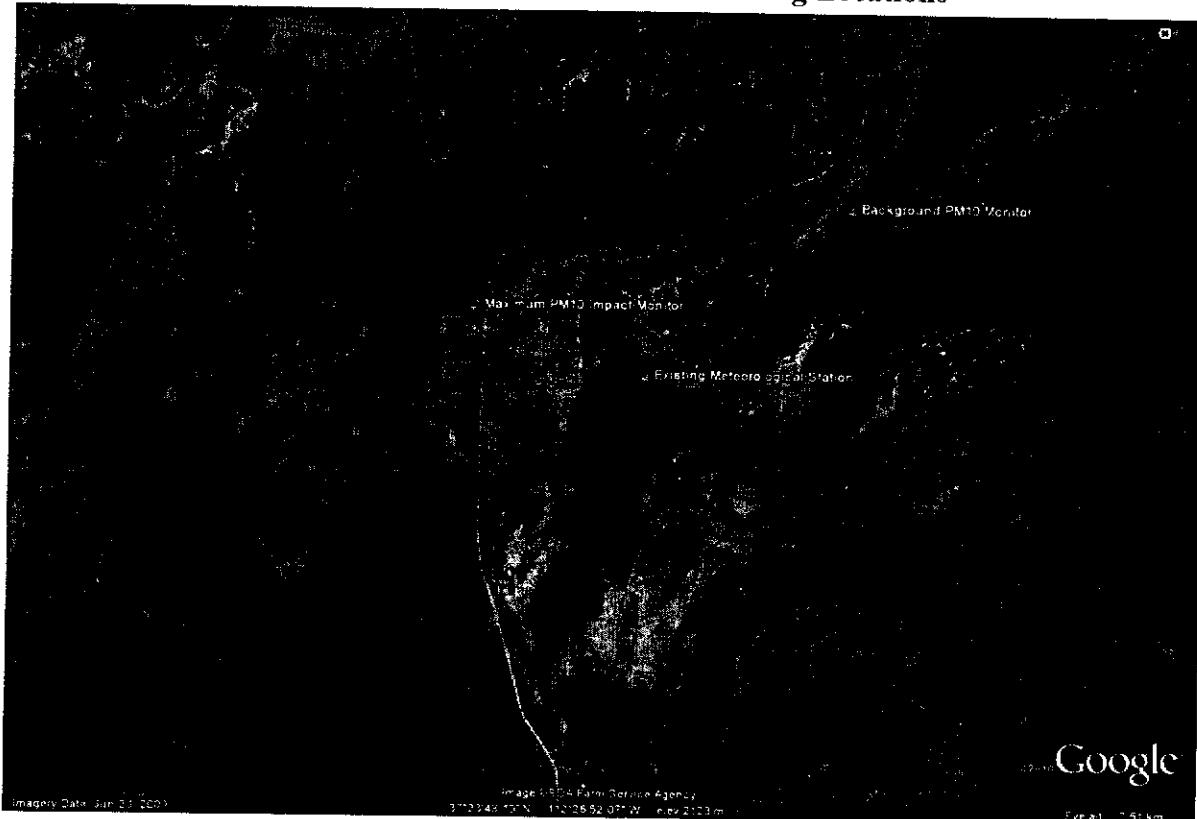

Figure 2 - Satellite View of Monitoring Locations

3.0 AIR QUALITY DATA SUMMARIES

A listing of the measured PM₁₀ concentrations for the quarter are presented in Appendix B, and Field Data Sheets generated during the collection of each sample are presented in Appendix D. Measurements were collected during a 24-hour periods and represent the average PM₁₀ concentration during the midnight to midnight data collection cycle. As required by the operating permit, duplicate measurements were made with Sampler #963B (designated as a compliance monitor) and Sampler #964C (designated as a co-located sampler). The quarterly mean PM₁₀ concentration and the comparison of measured concentrations to standards are based on measurements from the primary Sampler #963B. If a measurement from Sampler #963B was missing or invalid, the measurement from the secondary Sampler #964C was used.

The highest 24-hour mean PM₁₀ concentrations measured during the quarter from the two monitoring locations are summarized in Table I, Table II, and Table III. The three highest concentrations, # of valid samples, and the arithmetic mean concentrations from each of the sites are listed. All measured PM₁₀ concentrations were below the 24-hour National Ambient Air Quality Standard (NAAQS) of 150 µg/m³.

Table I - Summary of Measured PM₁₀ Concentrations (µg/m³)
Background Monitor - 962A

| RANK | DATE | PM ₁₀ CONCENTRATION |
|-------------------------|--------------------------------------|--------------------------------|
| Highest | 8/19/2011 | 32.4 |
| 2 nd Highest | 8/31/2011 | 16.3 |
| Monthly Mean | 7/1/11-7/31/11 | 10.3 |
| Monthly Mean | 8/1/11-8/31/11 | 16.4 |
| Monthly Mean | 9/1/11-9/30/11 | 7.3 |
| Quarterly Mean | 7/1/11-9/30/11 (14 valid samples) | 10.7 |

Table II - Summary of Measured PM₁₀ Concentrations (µg/m³)
Compliance Monitor - 963B

| RANK | DATE | PM ₁₀ CONCENTRATION |

4.0 DATA RECOVERY AND QUALITY ASSURANCE

4.1 Data Recovery

Monitor 962A

Monitor 962A collected 14 of the 16 samples during the third quarter. The percent recovery for this quarter is 87.5%. During the second quarter of sampling two samples were not collected.

The sample which was scheduled to be collected on August 7, 2011 was not collected due to equipment malfunction (monitor overran the scheduled run time). The 962A monitor was programmed to run for 24hrs beginning at midnight on the 7th and was found still running on the 8th, the run was halted by the operator after 33 hrs 40 min. This same malfunction occurred with the 963B monitor on July 26, 2011. The sample which was scheduled to be collected on August 13, 2011 was not collected due to human error the monitor was

programmed to collect a sample on September 13, 2011 instead of the 2011 U.S. EPA Ambient Particulate Monitoring Sample-Day Scheduled date of August 13, 2011.

Monitor 963B

Monitor 963B collected 15 of the 16 samples during the third quarter. The percent recovery for this quarter is 93.8%. During the quarter one sample was not collected.

The 963B monitor was programmed to run for 24hrs beginning at midnight on the July 26, 2011 and was found still running on the 27th, the run was halted by the operator after 34 hrs 40 min. The concentration data collected on 26th was not used in this quarter's statistical analysis.

Monitor 964C

Monitor 964C collected 16 samples, of which 14 were in compliance with the 2011 U.S. EPA Ambient Particulate Monitoring Sample-Day Schedule. The percent recovery for this quarter is 87.5%. During the quarter two samples were not collected.

The sample which was scheduled to be collected on August 7, 2011 and September 18, 2011 were not collected due to equipment malfunction (Job file is corrupt Script out of range). After several test runs working with BGI it has been determined that the mother board of the 964C monitor has been damaged in that the monitor cannot be programmed to run more than 3 days in the future. When the monitor is set up to run greater than 3 days away, the monitor will start at the beginning time and shut down within 3-5 seconds. BGI has committed to supply a new board as soon as one is available, until then ACD will ensure that the monitor is setup for a run as near the scheduled run time as possible to ensure collection of valid data.

The PM₁₀ data recoveries for the three monitoring stations are presented below:

Table V - Summary of Data Recovery

| SAMPLER | POSSIBLE SAMPLES | VALID SAMPLES | PERCENT DATA RECOVERY |
|---------|------------------|---------------|-----------------------|
| 962A | 16 | 14 | 87.5% |
| 963B | 16 | 15 | 93.8% |
| 964C | 16 | 14 | 87.5% |

4.2 Quality Assurance

Quality assurance procedures utilized to verify the integrity of the measured PM₁₀ data included the following:

1. Review of PM₁₀ precision measurements based upon duplicate, collocated measurements.
2. Independent quarterly audits of the PM₁₀ samplers.
3. Monthly zero and single point flow rate checks of the PM₁₀ samplers.

4.2.1 Precision of PM₁₀ Measurements

The precision of the PM₁₀ measurements was determined from the duplicate samples collected from the collocated BGI PQ200 Monitors 963B and 964C. As recommended in *40 CFR, Part 58*, Appendix A, Section 5.3.1, PM₁₀ precision checks are reported for instances when the concentrations for duplicate samples both exceed 3 µg/m³. Duplicate samples that did not meet this condition were omitted for the purposes of the precision checks. Appendix C, of this report summarizes precision calculations between the compliance monitor and the co-located monitor. Monthly flow rate verification data is also in Appendix C.

Precision calculations were developed based on 13 valid pairs of co-located monitoring data during the third quarter. Single point precision based on *40 CFR, Part 58*, Appendix A Equation 10 ranged from 32% to -24% with the majority of precision values occurring in the 10% to -10% range. The aggregate coefficient of variability (CV) calculated in accordance with *40 CFR, Part 58*, Appendix A Equation 11 is 13.9%. This value is above the 10% goal for aggregate CV. The value for quarter 3 CV was significantly impacted by the two outlier values of 32% and -24%. Additionally, the CV value is typically reviewed on an annual basis for assessment of overall measurement error. As a result, the CV goal exceedance should be noted but is unlikely to significantly affect annual CV or overall project error.

4.2.2 Audit Results

The accuracy of the PM₁₀ sampler flows was verified by a performance audit conducted by Air Resource Specialist on November 8, 2011. A copy of the audit report is presented in Appendix E and is summarized in Table VI. The audit results indicate that the three samplers were operating properly.

Table VI - Audit Summary

| SAMPLER | AUDIT % DIFFERENCE | LIMIT* | DESIGN % DIFFERENCE | LIMIT* |
|---------|-----------------------|-----------|------------------------|-----------|
| 962A | -0.6 | $\pm 4\%$ | 0.1 | $\pm 5\%$ |
| 963B | 1.3 | $\pm 4\%$ | 0.0 | $\pm 5\%$ |
| 964C | 2.5 | $\pm 4\%$ | -0.2 | $\pm 5\%$ |

*Values between $\pm 7\%$ and $\pm 10\%$ require recalibration but no data are invalidated.

4.2.3 Zero and Single Point Flow Rate Checks

Zero and single-point flow rate verifications are performed by a site technician on a monthly basis. The data was then input into a statistical calculator to calculate percent difference and bias between each of the monitors and the monthly single point flow rate measured by a NIST traceable calibration orifice. The calculator used is called the “Data Assessment Statistical Calculator” DASC Tool. DASC was developed for the data user community and can be found in the Precision and Accuracy Reporting System within the Quality Assurance section of EPA’s Ambient Monitoring Technology Information System. This data is presented in Appendix C of this report.

1.0 AUDIT SUMMARY

Alton Coal Development is operating three (3) Federal Reference Method (FRM) PM₁₀ particulate samplers and a meteorological station at the Coal Hollow Mine near Alton, Utah. The PM₁₀ samplers used are Model PQ200, manufactured by BGI.

Air Resources Specialists, Inc. (ARS) conducted a performance audit of the monitoring systems on November 8, 2011. Guidance from the following EPA documents was used to establish the audit procedures:

- 40 CFR 58, Appendix A. *Quality Assurance Requirements for SLAMS, SPMs, and PSD Air Monitoring*
- EPA *Quality Assurance Handbook for Air Pollution Measurement Systems:*
 - *Volume I. A Field Guide to Environmental Quality Assurance*
 - *Volume II. Ambient Air Quality Monitoring Program*

At the time of the audit, all three (3) FRM particulate samplers were operating within EPA and project accuracy goals. Ambient air quality audit results are summarized by parameter in Table 1-1.

Table 1-1
Summary of Ambient Air Quality Audit Results

| Parameter | Instrument/Analyzer | Within Accuracy Goal |
|----------------------------|-----------------------------|----------------------|
| Particulate Sampler | | |
| PM ₁₀ | BGI PQ200 - Background | Yes |
| PM ₁₀ | BGI PQ200 – East Co-Located | Yes |
| PM ₁₀ | BGI PQ200 – West Co-Located | Yes |

Details of the audit are presented in the following sections:

- | | |
|-------------|--------------------------------|
| Section 2.0 | Audit Methods |
| Section 3.0 | Audit Equipment |
| Section 4.0 | Audit Results |
| Appendix A | Audit Data Sheets |
| Appendix B | Audit Standards Certifications |

Any questions related to this audit or audit report should be addressed to:

2.0 AUDIT METHODS

Audit procedures, audit challenge ranges, and acceptance criteria are described below. These ranges and limits exceed or conform to the Alton Coal Quality Assurance Project Plan prepared by JBR. Audit results were verbally communicated to the Alton Coal Development Environmental Manager prior to departure from the site. Audit data forms are provided in Appendix A.

2.1 PARTICULATE SAMPLERS

Three (3) volumetric flow FRM PM₁₀ particulate samplers were audited. ARS audited the sampler with a deltaCal instrument which measures flow, ambient temperature, and barometric pressure. After conducting the flow audit, a system leak check was performed. During a leak check, the Model PQ200 FRM sampler will not measure flow rate; therefore, a change in vacuum over a two-minute period is used to identify a leak. The instrument manufacturer states in the operation manual, a measurement of ≥ 5 cm of water in a two-minute period is considered a leak. This value will be used to identify if a leak is present. The observed volumetric operational flow and design flow of the sampler were compared to the audit flows measured by the ARS deltaCal. Differences between the operational sampler flow and audit flow that are greater than $\pm 4\%$ are considered out of tolerance. Differences between the designated design flow and the audit flow greater than $\pm 5\%$ are considered out of tolerance as indicated in 40 CFR Part 58 Appendix A. In addition to the flow audits, the FRM's observed ambient temperature and barometric pressure sensors were also audited by comparison to the deltaCal values. A temperature difference greater than $\pm 2.0^{\circ}\text{C}$ and a barometric pressure difference greater than $\pm 10\text{mm Hg}$ are considered out of tolerance. Audit methods and acceptable criteria for the particulate samplers are summarized in Table 2-1.

Table 2-1

FRM PM₁₀ Particulate Samplers Audit Methods and Acceptance Criteria

| Parameter | Audit Method | Acceptance Criteria |
|--|---|---|
| Leak Check | Change in vacuum of closed inlet in 2 minutes | $< 5 \text{ cm H}_2\text{O in 2 min}^*$ |
| Actual Volumetric Sampler Flow | DeltaCal audit flow to actual sampler flow (volumetric) | $\leq \pm 4\%$ |
| Designated Design Flow | Designated design flow to audit flow (volumetric) | $\leq \pm 5\%$ |
| Ambient Temperature ($^{\circ}\text{C}$) | Audit temperature to sampler temperature | $\leq \pm 2^{\circ}\text{C}$ |
| Barometric Pressure (mm Hg) | Audit barometric pressure to sampler pressure | $\leq \pm 10\text{mm Hg}$ |

* As suggested by manufacturer.

3.0 AUDIT EQUIPMENT

All audit equipment and reference standards were in current calibration and traceable to the NIST or other authoritative references. Table 3-1 lists the specific audit equipment used and recertification dates. Copies of standards certifications for the equipment used in the audit are provided in Appendix C.

Table 3-1

Audit Equipment

| References | Manufacturer | Model Number | Serial Number | Recertification Date |
|-------------------|---------------------|---------------------|----------------------|-----------------------------|
| FRM Audit | BGI | deltaCal | 413 | 10/20/2012 |

4.0 AUDIT RESULTS

Detailed Alton Coal Development monitoring system audit results for the particulate samplers are shown in Tables 4-1 through 4-3. Audit findings and recommendations are discussed below.

4.1 AUDIT FINDINGS

Performance Audit Results

- All three (3) PM₁₀ samplers were operating within project accuracy goals

System Audit Results

- The meteorological station was not audited during this visit.

Table 4-1
