## **1.0 INTRODUCTION**

This report summarizes measurements of Particulate Matter less than 10 microns nominal aerodynamic diameter ( $PM_{10}$ ) collected and processed by Alton Coal Development, LLC, (ACD) from the five monitoring stations located at the Coal Hollow Mine Facility in Alton, Utah. Monitoring for  $PM_{10}$  is a condition of the mines operating permit.

$PM_{10}$  monitoring at the site consists of five BGI PQ200  $PM_{10}$  monitors run by solar power. Figure 2 of this report shows the approximate locations of the monitoring locations. The BGI PQ200 monitors are EPA Reference Method monitors and are operated on the National Particulate 1-in-6 Monitoring Schedule. The data summarized herein covers the data collected during the fourth quarter of 2020.

## **2.0 SITE LOCATION**

The Coal Hollow Mine is located in Kane County, Utah, approximately three miles southeast of the town of Alton, Utah. Figure 1 on the following page gives an overview of the site location. Specifically, the Coal Hollow Mine is located in Sections 19, 20, 29, and 30 of Township 39S, Range 5W; with an approximate facility location of:

Northing: 41401699 meters

Easting: 371534 meters

Universal Transverse Mercator (UTM) Datum NAD27, Zone 12

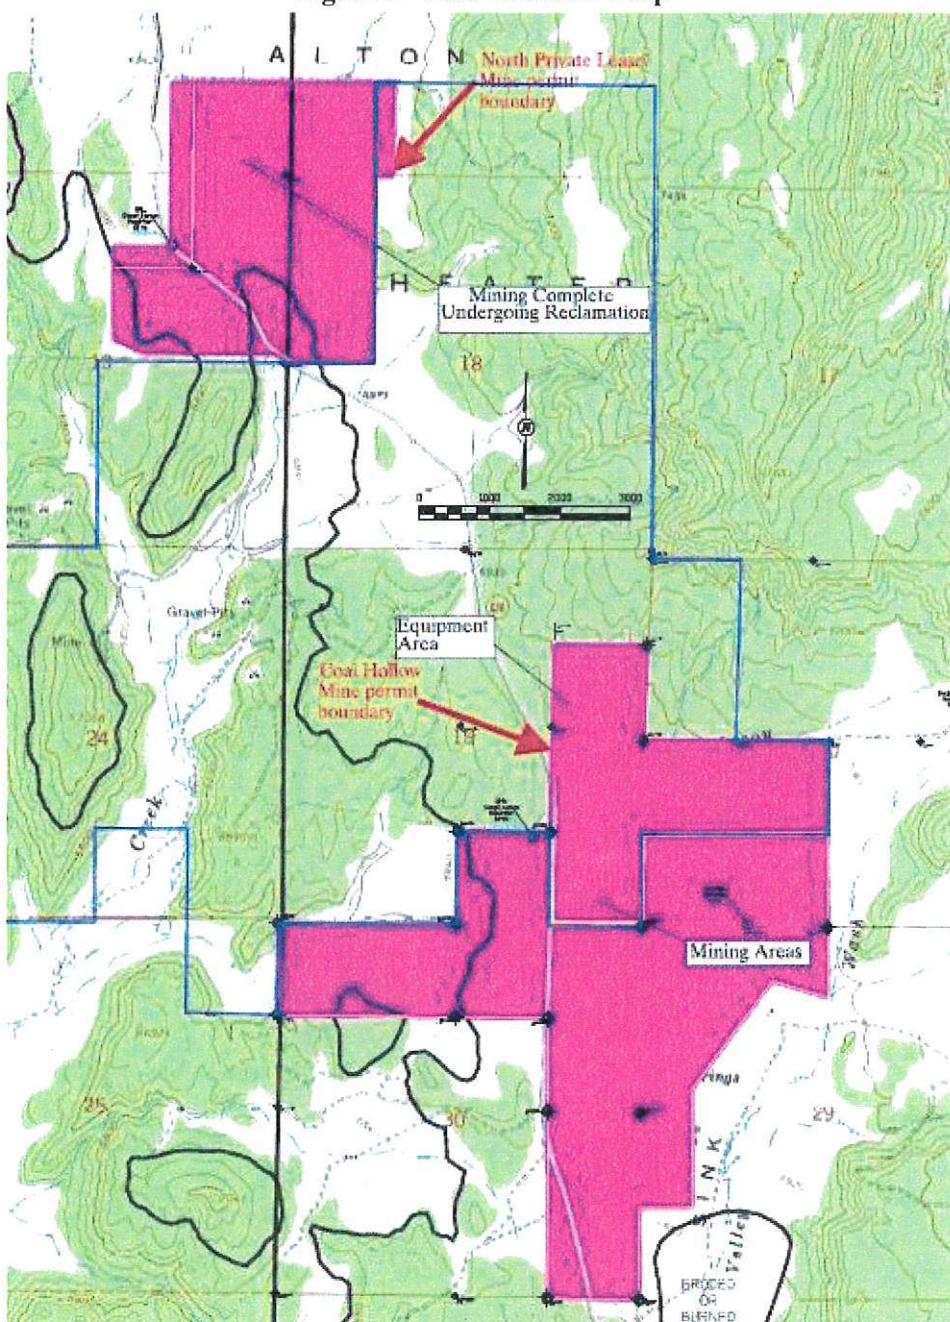

The three monitoring locations as depicted in Figure 2, are located in positions to collect both background and maximum  $PM_{10}$  concentrations. The background monitor has a manufacturer's serial #962, therefore this monitor will be referred as monitor 962A. The compliance monitor for the Coal Hollow Mine (CHM) has a manufacturer's serial #963, therefore this monitor will be referred as monitor 963B. The co-located monitor has a manufacturer's serial #964, therefore this monitor will be referred as monitor 964C. The background monitor coordinates are Northing: 4140856, Easting 373119, (UTM) Datum NAD27, Zone 12. The CHM compliance monitor and the co-located monitor coordinates are Northing: 4140396, Easting 371147, (UTM) Datum NAD27, Zone 12. The North Private Lease area of the CHM is located in Sections 12, 13 of Township 39S, Range 6W and Sections 7, 18 of Township 39S, Range 5W. The compliance monitor for the North Private Lease has a manufacturer's serial #2366, therefore this monitor will be referred as monitor 2366D. The co-located monitor has a manufacturer's serial #2398, therefore this monitor will be referred as monitor 2398E. The NPL compliance monitor and the co-located monitor coordinates are Northing: 4141570, Easting 370928, (UTM) Datum NAD27, Zone 12.

### **3.0 AIR QUALITY DATA SUMMARIES**

A listing of the measured PM<sub>10</sub> concentrations for the quarter are presented in Appendix B (individual data sheets are provided on the enclosed disk in the PDF version of Appendix B) and Field Data Sheets generated during the collection of each sample are presented in Appendix D. Measurements were collected during a 24-hour periods and represent the average PM<sub>10</sub> concentration during the midnight to midnight data collection cycle. As required by the operating permit for the CHM, duplicate measurements were made with Sampler #963B (designated as a compliance monitor) and Sampler #964C (designated as a co-located sampler) to the extent possible. The quarterly mean PM<sub>10</sub> concentration and the comparison of measured concentrations to standards are based on measurements from the primary Sampler #963B. If a measurement from Sampler #963B was missing or invalid, the measurement from the secondary Sampler #964C would be used. Also, required by the operating permit for the NPL, duplicate measurements were made with Sampler #2366D (designated as a compliance monitor) and Sampler #2398E (designated as a co-located sampler) to the extent possible. The quarterly mean PM<sub>10</sub> concentration and the comparison of measured concentrations to standards are based on measurements from the primary Sampler #2366D. If a measurement from Sampler #2366D was missing or invalid, the measurement from the secondary Sampler #2398E would be used.

The highest 24-hour mean PM<sub>10</sub> concentrations measured during the quarter from the three monitoring locations are summarized in Table I, Table II, Table III, Table IV and Table V. The three highest concentrations, # of valid samples, and the arithmetic mean concentrations from each of the sites are listed. All measured PM<sub>10</sub> concentrations were below the 24-hour National Ambient Air Quality Standard (NAAQS) of 150 µg/m<sup>3</sup>.

**Table I - Summary of Measured PM<sub>10</sub> Concentrations (µg/m<sup>3</sup>)  
Background Monitor - 962A**

RANK	DATE	PM <sub>10</sub> CONCENTRATION
Highest	10/6/20	21.9
2 <sup>nd</sup> Highest	10/24/20	13.1
Monthly Mean	10/1/20-10/31/20	10.9
Monthly Mean	11/1/20-11/30/20	3.7
Monthly Mean	12/1/20-12/31/20	5.4
Quarterly Mean	10/1/20-12/31/20 (15 valid samples)	6.7

**Table II - Summary of Measured PM<sub>10</sub> Concentrations (µg/m<sup>3</sup>)  
Compliance Monitor - 963B**

RANK	DATE	PM <sub>10</sub> CONCENTRATION
Highest	10/6/20	119.6
2 <sup>nd</sup> Highest	10/12/20	77.7
Monthly Mean	10/1/20-10/31/20	56.6
Monthly Mean	11/1/20-11/30/20	N/A*
Monthly Mean	12/1/20-12/31/20	N/A*
Quarterly Mean	10/1/20-12/31/20 (4 valid samples)	67.5

\*B monitor was down for repairs in November and December

**Table III - Summary of Measured PM<sub>10</sub> Concentrations (µg/m<sup>3</sup>)**  
**Collocated Monitor – 964C**

RANK	DATE	PM <sub>10</sub> CONCENTRATION
Highest	10/6/20	124.2
2 <sup>nd</sup> Highest	11/17/20	113.7
Monthly Mean	10/1/20-10/31/20	57.3
Monthly Mean	11/1/20-11/30/20	40.7
Monthly Mean	12/1/20-12/31/20	27.1
Quarterly Mean	10/1/20-12/31/20 (13 valid samples)	41.8

**Table IV - Summary of Measured PM<sub>10</sub> Concentrations (µg/m<sup>3</sup>)**  
**Compliance Monitor – 2366D**

RANK	DATE	PM <sub>10</sub> CONCENTRATION
Highest	10/12/20	82.6
2 <sup>nd</sup> Highest	12/23/20	59.8
Monthly Mean	10/1/20-10/31/20	42.0
Monthly Mean	11/1/20-11/30/20	30.3
Monthly Mean	12/1/20-12/31/20	26.2
Quarterly Mean	10/1/20-12/31/20 (9 valid samples)	33.7

**Table V - Summary of Measured PM<sub>10</sub> Concentrations (µg/m<sup>3</sup>)**

## 4.0 DATA RECOVERY AND QUALITY ASSURANCE

### 4.1 Data Recovery

#### Monitor 962A

Monitor 962A collected 15 of the 15 samples during the quarter. The percent recovery for this quarter is 100%.

#### Monitor 963B

Monitor 963B collected 4 of the 4 samples during the quarter. The percent recovery for this quarter is 27%. For the sample date of October 30<sup>th</sup> through December 29<sup>th</sup> the monitor had incomplete runs which were later determined to be a worn out bearing in the pump.

#### Monitor 964C

Monitor 964C collected 13 of the 15 samples during the quarter. The percent recovery for this quarter is 87%. For the sample dates of November 5th, the monitor did not complete the 24hr sample period. For the sample date of November 11<sup>th</sup>, an expired filter was used making it an invalid run.

#### Monitor 2366D

Monitor 2366D collected 9 of the 15 samples during the quarter. The percent recovery for this quarter is 60%. For the dates of October 30<sup>th</sup> and November 11<sup>th</sup> through December 5th, the monitor did not run due to a faulty mother board that was affected by colder temperatures.

#### Monitor 2398E

Monitor 2398E collected 15 of the 15 samples during the quarter. The percent recovery for this quarter is 100%.

The PM<sub>10</sub> data recoveries for the five monitoring stations are presented below:

**Table VII - Summary of Data Recovery**

SAMPLER	POSSIBLE SAMPLES	VALID SAMPLES	PERCENT DATA RECOVERY
962A	15	15	100%
963B	15	4	27%
964C	15	13	87%
2366D	15	9	60%
2398E	15	15	100%

## **4.2 Quality Assurance**

Quality assurance procedures utilized to verify the integrity of the measured PM<sub>10</sub> data included the following:

1. Review of PM<sub>10</sub> precision measurements based upon duplicate, collocated measurements.
2. Independent quarterly audits of the PM<sub>10</sub> samplers.

3. Monthly zero and single point flow rate checks of the PM<sub>10</sub> samplers.

#### **4.2.1 Precision of PM<sub>10</sub> Measurements**

The precision of the PM<sub>10</sub> measurements was determined from the duplicate samples collected from the collocated BGI PQ200 Monitors 963B and 964C at the Coal Hollow Mine and 2366D and 2398E at the North Private Lease. As recommended in *40 CFR, Part 58*, Appendix A, Section 5.3.1, PM<sub>10</sub> precision checks are reported for instances when the concentrations for duplicate samples both exceed 3 µg/m<sup>3</sup>. Duplicate samples that did not meet this condition were omitted for the purposes of the precision checks. Appendix C, of this report summarizes precision calculations between the compliance monitor and the co-located monitor. Monthly flow rate verification data is also summarized in Appendix C.

Precision calculations at the Coal Hollow Mine were developed based on 4 valid pairs of co-located monitoring data during the quarter due to equipment malfunctions with both the 962 B and the 963C monitor. Single point precision based on *40 CFR, Part 58*, Appendix A Equation 2 results were -16.6% to 27.5%. The aggregate coefficient of variability (CV) calculated in accordance with *40 CFR, Part 58*, Appendix A Equation 11 is 31.2%. This value is not within the 10% goal for aggregate CV.

Precision calculations at the North Private Lease were developed based on only 9 valid pairs of co-located monitoring data during the quarter due to equipment malfunctions with the 2366D monitor. Single point precision based on *40 CFR, Part 58*, Appendix A Equation 2 results were -73.5% to 58.3%. The aggregate coefficient of variability (CV) calculated in accordance with *40 CFR, Part 58*, Appendix A Equation 11 is 44.4%. This value is not within the 10% goal for aggregate CV.

#### **4.2.2 Audit Results**

The accuracy of the PM<sub>10</sub> sampler flows was verified by a performance audit conducted by Air Resource Specialist on October 28, 2020. A copy of the audit report is presented in Appendix E and is summarized in Table VI. The audit results indicate that all five samplers were operating properly.

**Table VIII- Audit Summary**

SAMPLER	AUDIT % DIFFERENCE	LIMIT*	DESIGN % DIFFERENCE	LIMIT*
962A	1.8	±4%	-1.8	± 5%
963B	-0.4	±4%	0.4	± 5%
964C	0.4	±4%	-0.3	± 5%
2366D	0.4	±4%	-0.4	± 5%
2398E	-2.3	±4%	2.4	± 5%

\*Values between ± 7% and ± 10% require recalibration but no data are invalidated.

#### **4.2.3 Zero and Single Point Flow Rate Checks**

Zero and single-point flow rate verifications were performed by a site technician at the time of the audit. The data was then input into a statistical calculator to calculate percent difference and bias between each of the monitors and the monthly single point flow rate measured by a NIST traceable calibration orifice. The calculator used is called the “Data Assessment Statistical Calculator” DASC Tool. DASC was developed for the data user community and can be found in the Precision and Accuracy Reporting System within the Quality Assurance section of EPA’s Ambient Monitoring Technology Information System. This data is presented in Appendix C of this report.

Validation of data is limited by the provided information. Data have been validated based on laboratory QC, field observations and instrument data if made available, as well as other information available to IML Air Science (IML). Additional data validation based on information not provided to IML may be required. Final validation of these data are the responsibility of the data owner.

## 1.0 INTRODUCTION

Air Resource Specialists, Inc. (ARS) conducted a performance audit of Alton Coal Development, LLC ambient air quality monitoring systems on October 28, 2020. The monitoring sites are located at the Coal Hollow Mine near Alton, Utah.

Table 1-1

### Site Location Information

	Primary CHM	Background	Primary NPL	Meteorological
Latitude	37° 24' 5.0" N	37° 24' 20.9" N	37° 24' 43" N	37° 23' 53.2" N
Longitude	112° 27' 21.0" W	112° 26' 1.1" W	112° 27' 30.6" W	112° 26' 43.1" W
UTM	12S 371147 4140396	12S 373119 4140856	12S 370928 4141570	12S 372073 4140018
Elevation	6,890 feet MSL	7,158 feet MSL	6,959 feet MSL	7,007 feet MSL

Audit results for the particulate samplers are summarized in Table 1-2. Audit results for the meteorological measurements are summarized in Table 1-3. Detailed discussions of performance audit findings and other findings can be found in Section 3.0.

Table 1-2

### Summary of Particulate Sampler Audit Results

	Parameter	Instrument	Within Accuracy Goal
Primary CHM	PM <sub>10</sub>	BGI PQ200S	Yes
	PM <sub>10</sub> (collocated)	BGI PQ200S	Yes
Background #1	PM <sub>10</sub>	BGI PQ200S	Yes
Primary NPL	PM <sub>10</sub>	BGI PQ200	Yes
	PM <sub>10</sub> (collocated)	BGI PQ200	Yes

Details of the audit are presented in the following sections:

Section 2.0	Audit Methods and Equipment
Section 3.0	Audit Results
Appendix A	Audit Data Forms
Appendix B	Audit Standards Certifications

Any questions related to this audit or audit report should be addressed to:

Christian A. Kirk  
Quality Assurance Officer / Lead Auditor  
**Air Resource Specialists, Inc.**

## 2.0 AUDIT METHODS

Audit procedures, audit challenge ranges, and acceptance criteria are described below. These ranges and limits conform to EPA's PSD guidelines. Audit results were verbally communicated to the site operator prior to departure from the site. A follow-up e-mail summarizing audit findings was also sent to Alton Coal Development, LLC personnel. Audit details are provided in Appendix A.

Guidance from the following EPA documents was used to establish the audit procedures:

- 40 CFR 58, Appendix B. *Quality Assurance Requirements for Prevention of Significant Deterioration (PSD) Air Monitoring*
- EPA *Quality Assurance Handbook for Air Pollution Measurement Systems*:
  - *Volume I. A Field Guide to Environmental Quality Assurance*
  - *Volume II. Ambient Air Quality Monitoring Program*
  - *Volume IV. Meteorological Measurements*
- EPA *Meteorological Monitoring Guidance for Regulatory Modeling Applications*

### 2.1 PARTICULATE SAMPLERS (FRM PM<sub>10</sub>)

The filter-based FRM PM<sub>10</sub> particulate samplers are audited in their normal operating mode. ARS audits the samplers with a BGI deltaCal audit standard which measures flow, temperature, and barometric pressure. Prior to conducting the flow audit, a system leak check is performed in accordance with the manufacturer's specifications. The observed volumetric operational flow and design flow of the sampler are compared to the audit flows measured by the audit standard. Differences between the operational sampler flow and audit flow that are greater than  $\pm 10\%$  are considered out of tolerance. Differences between the designated design flow and the audit flow greater than  $\pm 10\%$  are considered out of tolerance. In addition to the flow audits, observed ambient temperature, filter temperature, and barometric pressure measurements of the particulate samplers are also audited by comparison to the audit standard. A temperature difference greater than  $\pm 2^{\circ}\text{C}$  and a barometric pressure difference greater than  $\pm 10\text{mm Hg}$  are considered out of tolerance. Audit methods and acceptable criteria for the particulate samplers are summarized in Table 2-1.

Table 2-1

#### Particulate Samplers Audit Acceptance Criteria

Parameter	Audit Method	Acceptance Criteria
FRM PM <sub>10</sub>	Leak Check	Manufacturer specs
	Audit flow to actual sampler flow	$\leq \pm 10\%$
	Design criteria flow to audit flow	$\leq \pm 10\%$
	Audit temperature to sampler temperature	$\leq \pm 2^{\circ}\text{C}$
	Audit temperature to sampler filter temperature	$\leq \pm 2^{\circ}\text{C}$
	Audit barometric pressure to sampler pressure	$\leq \pm 10\text{mm Hg}$

### **3.0 AUDIT RESULTS**

Audit findings and recommendations are discussed below. Detailed audit results are provided in Appendix A.

#### Performance Audit Results

There were no performance audit failures or findings.

### Procedures Used in this Event

Procedure Name	Description
MPC-AIR-001 Rev. 01	Air Velocity, Temperature and Flow Meters, General, rev01, Feb-11-2020

Calibrating Technician:

JERROD SALAZAR

QC Approval:

ROBERT MEANS

STATEMENTS OF PASS OR FAIL CONFORMANCE: The uncertainty of measurement has been taken into account when determining compliance with specification, as per ILAC-G8/03/2009. All measurements and test results guard banded to ensure the probability of false-accept does not exceed 2% in compliance with ANSI/NCSL Z540.3-2006 and in case without guard banded the probability of false-accept depending on test uncertainty ratio.

THE CALIBRATION REPORT STATUS:

PASS- Term used when compliance statement is given, and the measurement result is PASS<sup>1</sup>.

PASS<sup>2</sup>- Term used when compliance statement is given, and the measurement result is conditional passed or PASS<sup>2</sup>.

FAIL- Term used when compliance statement is given, and the measurement result is FAIL.

FAIL<sup>2</sup>- Term used when compliance statement is given, and the measurement result is conditional failed or FAIL<sup>2</sup>.

REPORT OF VALUE- Term used when reported measurement is not requiring compliance statement in report.

ADJUSTED- When adjustments are made to an instrument which changes the value of measurement from what was measured as found to new value as left.

LIMITED - When an instrument fails calibration but is still functional in a limited manner.

The expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%, unless otherwise stated. This calibration report complies with ISO/IEC 17025:2017 and ANSI/NCSL Z540.3. Calibration cycles and resulting due dates were submitted/approved by the customer. Any number of factors may cause an instrument to drift out of tolerance before the next scheduled calibration. Recalibration cycles should be based on frequency of use, environmental conditions and customer's established systematic accuracy. All standards are traceable to SI through the National Institute of Standards and Technology (NIST) and/or recognized national or international standards laboratories. Services rendered include proper manufacturer's service instruction and are warranted for no less than thirty (30) days. The information on this report pertains only to the instrument identified, and/or may not be reproduced in part or in a whole without the prior written approval of the issuing MP Calibration Laboratory.

## Calibration Report of BGI DeltaCal DC1 Air Flow Calibrator

MPC Control #:	DV0036	Serial Number:	1220
Asset ID:	DV0036	Calibration Date:	May 20, 2020

### Flow Accuracy

Range	Nominal	Lower Limit	As Found	As Left	Upper Limit	Result
1.5 to 19.5 L/min	2.000 L/min	1.985 L/min	1.998 L/min	1.998 L/min	2.015 L/min	PASS
1.5 to 19.5 L/min	6.000 L/min	5.955 L/min	6.008 L/min	6.008 L/min	6.045 L/min	PASS
1.5 to 19.5 L/min	10.00 L/min	9.93 L/min	10.02 L/min	10.02 L/min	10.08 L/min	PASS
1.5 to 19.5 L/min	16.00 L/min	15.88 L/min	15.97 L/min	15.97 L/min	16.12 L/min	PASS
1.5 to 19.5 L/min	19.00 L/min	18.86 L/min	19.04 L/min	19.04 L/min	19.14 L/min	PASS

### Barometric Pressure and Absolute Pressure

deltaCal:

Barometric Pressure (set): 747 mm of Hg

### Room Temperature

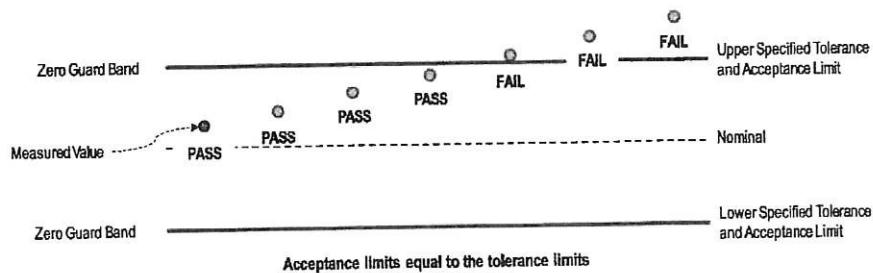

deltaCal:

Ambient Temperature (set): 21.7° C

### Statements of Pass or Fail Conformance

The status of compliance with the acceptance criteria is reported as:

- PASS — Compliant with specification.  
FAIL — Not compliant with specification.

- End of Calibration Report -
