Start Date End Date

**Leaking Underground Storage Tank Petroleum Cleanup Project
Former State Prison, 14400 S Pony Express Rd., Draper, Utah
Facility ID No. 4002081 and Release Site OFU**

The Division of Environmental Response and Remediation (DERR) is planning to oversee the remediation of the petroleum-contaminated soil at the above site. The environmental consultant for this project is WSP USA Environment & Infrastructure Inc.

Site Description

The Site is the location of a former diesel underground storage tank. Petroleum hydrocarbons contamination in soil underneath product piping associated with the storage tank were discovered during removal of the tank in October 2022. The extent of contamination is an approximate area of one-tenth of an acre, to an approximate depth of up to 40 feet below the current surface. No hydrocarbon contamination to groundwater were identified underneath the site.

Proposed Remediation Method

The proposed remediation method is ‘Dig and Haul’ and will consist of the following: Impacted soils will be dug from the site, loaded directly onto haul trucks, and transported to an off-site permitted disposal facility. Confirmation soil samples will be collected to ensure the protectiveness of the remedy for the future commercial/industrial land use planned for the site.

Proposed Schedule

Excavation is planned to begin on or about June 1, 2024 and is expected to take approximately six weeks.

A copy of the Corrective Action Plan Meeting Summary Letter prepared for this site can be reviewed at the DERR Public Notices website at:
