Morgan Ranches Dairy LLC has a ground water discharge permit covering the dairy operation. Manure from the dairy is flushed from the barns and then separated into liquid/solid fractions. The liquid fraction is stored in an anaerobic lagoon and is land applied during the growing season at agronomic rates. The solid fraction is composted and used on available land or sold off site. The permit requires wastes from the lagoon system to be disposed of in a manner that will not cause surface or ground water contamination, following a comprehensive nutrient management plan.
