

The following comments have been received either in writing or by e-mail during the public comment period. Although DEQ is not required to post these comments on its website, it has done so to aid the public discourse.

Commenter	Comment
Cindy Brinson	I would like to voice my opinion as being opposed to the Kennecott copper mine Cornerstone project. I prefer to be able to breathe clean air and the copper mine now already seriously compromises the air quality of the entire Salt Lake valley.
Jean Arnold, Lisa Rohde, Mike Conatser, John Aldrich	<p>The DAQ must not allow Kennecott to expand with its proposed Cornerstone Project. SLC's air quality is among the nation's worst. We cannot afford the additional pollution the expansion would add to our valley. Air pollution's contribution to our burden of health care expenditures is probably about 10%. Kennecott's share acts as nothing less than a tax exacted on all Salt Lake County residents.</p> <p>Currently, KUC provides less than 1/4 of 1% of jobs in SL and Utah Counties, but about 30% of our pollution. It is by far the largest industrial source of air pollution along the Wasatch Front, emitting ten times more than the next largest industrial source, the Chevron oil refinery. The expansion will increase county-wide NOx emissions by 14% & PM10 by 12%, for a combined 5,492 tons per year.</p> <p>Kennecott is using an unpublished student thesis to support its claims (Tandon, 1996 "Airflow Patterns...") which is unacceptable. A validated, peer reviewed study based on real-time field data, conducted by an independent part(s) is needed to determine the amount, if any, of PM10 and PM2.5 that remains in the open-pit.</p> <p>KUC has depicted its proposed exchange of coal for natural gas-generated electricity as a significant reduction in its emissions. While these details are still unavailable and not part of this permit, it is obvious they will not be enough to offset the increases secondary to the mine expansion. Furthermore, this part of the plan will increase air pollution at the worst part of the year — KUC currently cannot operate its coal power plants during the winter, so it must buy its electricity from the grid. This proposal would allow winter operation of their own new natural gas power plants, further increasing wintertime air pollution.</p> <p>Salt Lake County is already in violation of the EPA's national air quality standards. The EPA has put the Utah DAQ on notice that they are proposing to disallow the Utah SIP for achieving compliance on PM10. Nonetheless, Kennecott is trying to increase mine activity 32% to 260 million tons within a state SIP that has already been rejected by the EPA with their current mining activity at 197 million tons. One of two things is likely to happen. Other less polluting businesses will have their emissions curtailed, or Utah will be sanctioned by the EPA and denied corresponding federal funds. Either way, this will end up being a serious economic loss to the community.</p> <p>The mission of the DAQ is to protect the health of Utah's citizenry. The Rio Tinto/Kennecott expansion adds significantly to the health risks and costs of Wasatch Front communities. While many have touted the economic benefits of this project, you must strike these comments from the record as they are completely unrelated to your mission.</p>

<p>Paul Tusting, Alex Wight, Joni Weiss</p>	<p>I am asking the UT DAQ to require KUC to withdraw the request to modify the SIP and withdraw their NOI for the KUC Cornerstone expansion until:</p> <ol style="list-style-type: none"> 1. The Current SIP is approved (decision by the Region 8 EPA by December 1, 2011); 2. A validated, peer reviewed study based on real-time field data is conducted by an independent part(s) to determine the amount, if any, of PM10 and PM2.5 remains in the open-pit. The student thesis (Tandon, 1996 "Airflow Patterns...") is unacceptable; 3. The real emissions of Cornerstone (without offsets on non-required reductions volunteered by KUC) are stated and stated to the public, and the emissions of all permits not currently filed with the UT DAQ but related to this project are stated in totality; 4. The UTDAQ provides a list of changes between revisions (commonly provided) so that commenter can evaluate changes in comparison to the NOI, which has remained as yet, unchanged from its original submission. (The TSD has been revised twice since its original submittal in August of 2010. The NOI, however, was submitted in August of 2010, but has not been revised in parallel. The nature of the revisions between versions of the TSD involves emission changes, but have not been documented by DAQ in a way that these can be evaluated by the public); 5. The UT DAQ provides access to all its analyses of both KUC requests; 6. The UT DAQ publishes a statement of the current inventory of criteria pollutants, adds the actual KUC increases, and then states the additional pollutants expected by growth using the Governor's projections – 3 year, 5 year, and 5 year increments till 2050.
<p>Anupam Tyagi</p>	<p>Hans is partly right in this. However, we need to think clearly what 'economic' growth can be? Is services growth not economic growth? Economic growth is about growth of value, not growth of material processing. Economic growth does not necessarily require high material processing, through-put or pollution? The question we should be answering is: How to get high value growth?</p> <p>We keep discussing this, and we get to the intermediate point of: get the prices corrected, by internalizing externalities, so goods and services are valued correctly. By price I mean price in an 'economic' sense and not monetary sense: a low market price (monetary price) good with high pollution and health damages is expensive in an economic (price) sense. Then we ask, how will output be 'valued' correctly? Then we keep discussing that and get to the point that they will be valued correctly according to social 'values' (and mechanisms to implement those in the economy). If people do not value the environment or their health (could be due to ignorance, or other reasons), price will not reflect that. So to get the price correct, we need value correction, to get value correction, we need social value correction. But who decides what is correct social value. We are back to discussing what we should be discussing right in the beginning, but may be good to go through the motions. In this meta-physical sense, market is always right.</p> <p>Has anyone been noticing metal and mining product prices over the past few years? Are we suddenly running out of them? Or is there something else going on?</p>
<p>Fabienne Poulain, PhD</p>	<p>I am writing to strongly oppose the project of Kennecott to expand its mine activity. As you know and as recently pinpointed by Forbes, who classified Salt Lake as one of the most "toxic cities", our city already produces many pollutants, a large part of them released in the air. This is particularly obvious in winter during inversion periods, when the air not only is colored in brown and prevents us from seeing further than 500 ft, but also induces irritations in our lungs and is responsible for health problems.</p> <p>Kennecott is already the source of about one third of air pollution here. By increasing their activity by 32% as they propose, they will not only generate additional amounts of waste rocks, but also more air pollutants. I strongly believe breathable air is more important than economic gain in this case, and that our health should prime in our decisions. This is why I am urging you to prevent our air from becoming worse, by refusing the project of mine extension</p>

	<p>proposed by Kennecott.</p>
<p>Carol Walters</p>	<p>I live in Provo, and work with the Utah Valley Earth Forum, but the things that Rio Tinto does affect those of us in Utah Valley as well as those in Salt Lake Valley. We are among their down winders. Every morning in the winter, I wake up with a sinus headache. I have had pneumonia repeatedly. I watch my children and grandchildren struggle with asthma and other respiratory problems that are exacerbated by our terrible air quality, which, as you know is often among the worst in the nation. For us this has been incapacitating. For others it is life threatening. I sympathize with the relatively small percentage of Utah workers whose jobs are dependent on Rio Tinto, but a job isn't much good if you can't breathe.</p> <p>When air quality is discussed, people tend to throw up their hands and say, "Well, it is just a function of the geological configuration of our area." While that is partly true, it is not an excuse for doing nothing. It is, in fact the reason for doing all we can do to prevent garbage being dumped into our air.</p> <p>I appreciate the things that Rio Tinto has done to become more environmentally responsible, but this application is not one of them. Their own published information refutes their claims that this expansion will not increase pollution, especially during the months of our worst air quality problems. If they were serious about reducing pollution, their profits would certainly allow them to replace all their coal fired plants with natural gas, or better yet with wind generated power, whether or not their application for expansion were approved.</p> <p>I want to express my objection to the fact that representatives of the local municipalities which have received "contributions" from Rio Tinto were given precedence in the Feb. 22 meeting, allowing them to take most of the time when the press was present, and thereby preventing the press from hearing the objections to the application from the majority of the citizens in attendance.</p> <p>I ask that the DEQ reject this Rio Tinto application for expansion of their mining operation. You have been given the responsibility to protect the public good and we all have to breathe.</p>
<p>Beverly Terry</p>	<p>I am 100% opposed to the Kennecott expansion Cornerstone Project. The air pollution along the Wasatch Front is already one of the worst in the nation. UTDAQ is already in violation of air quality standards. Kennecott provides FEW jobs in Utah (1/4 of 1% of jobs in SL and UT counties) compared to providing 30% of the industrial air pollution. It is the largest industrial polluter in the state of Utah and this proposal will not lower pollution levels. It gives them the opportunity to pollute even more during winter months when we are most at risk.</p> <p>I have asthma and so does my son. We are unable to leave the house without medication and health issues for over two months as citizens of this state because of air pollution. Why don't you (Dept of Air Quality) stand up for citizens and not industrial polluters. That is your real job. You are not the Chamber of Commerce!</p> <p>I am a school teacher. When I was a child we used to go on field trips to Kennecott to see the huge mining operation. Now, all over Utah your children are hearing the truth about Kennecott's destruction of our environment here in Utah, and your children and grandchildren are going to wonder why you allowed this pollution and health hazard to exist. What will you tell them?? Will you tell them that you are really in bed with the polluters? That you have no intention of cleaning up Utah's air? That your main purpose is to support polluters because they are a business and have representatives lobbying your dept? Are there bribes? I noticed at the last public meeting that there were lots of mayors and councilmen who mentioned "gifts" to them from Kennecott. And yet not one of them said they had surveyed their constituents to get their opinions. It really appears that people in places that should protect citizens are being bought off. Is this what you want your children to eventually know? How many children have you killed today by supporting polluters?</p>

<p>Natasha Seegert</p>	<p>I am writing to express my opposition to Kennecott's proposed Cornerstone Project. I am strongly opposed to this expansion.</p> <p>The air quality in Utah is ranked among the worst in the nation. Poor air quality results in increased health issues and increased health care costs. Kennecott's drive for increased profits results in an increased public burden in the form of long-term poor health and increased health care costs.</p>
<p>Terry Marasco</p>	<p>Dear Amanda and Cheryl, you know I have been copied on the EPA letter (Feb 25, 2011) to Cheryl. I also have a copy of the June 30, 1999 letter (to: Trueman) referenced in the Feb 25 EPA letter. I have also read the federal register (40 CFR Part 52 [EPA-R08-OAR-2006-0013; FRL-9087-5] , Approval and Promulgation of Air Quality Implementation Plans; Utah; Redesignation Request and Maintenance Plan for Salt Lake, County; Utah County; Ogden City PM10 Nonattainment Area) and come away with this:</p> <p>The recent letter states and the record shows back to 1999 that the UT DAQ is more about repeating mistakes than proffering the appropriate corrections to the variety issues with the EPA, which affects the health of Utah's citizenry.</p> <p>The UT DAQ was told many times of the issues but keeps on course to advance less than adequate corrections. And now the unlikelihood that the BCM expansion will be approved. The same mistakes can be traced back to 1999.</p> <p>It appears to me that in fact it is the UT DAQ that is effectively stalling the permit process. It is either doing one of two things: 1) lacking an understanding of the information submitted, or 2) being pressured to advance KUC permits. I would want to believe the former.</p> <p>Utah's reputation is suffering nationally which must have a significant effect on our economy: the "worst air" in the nation, and the TRI inventory noted by Forbes shows Utah as one of the 10 most toxic cities. At the same time Utah is advertising in CA to move to Utah and the irony is move from the worst to the worst. This must stop and is a matter of health and the economy.</p> <p>The UT DAQ needs to start over and require KUC to resubmit more researched and adequate documentation, particularly re: its real emissions. The current course will collide with regulations, and worse heighten the public's mistrust of the DAQ as the protector of the public's health. In any of the documentation at the Federal, State, and in this case, KUC submissions there is little the UT DAQ is doing to clear the air shed for attainment. And things are coming down on us: ozone issue in the Uinta Basin, new air alerts in expanded counties, stricter standards based on new health findings.</p> <p>I hope you see the iceberg before you hit it.</p> <p>Know if there is anything we on the ground can do to move the airshed to a new level, we are willing to focus our enormous energy toward that goal. Just ask.</p>

Comment re KUC NOI Terry Marasco

It is inappropriate ask the public to spend valuable time and effort reading and studying this proposed AO when the conditions for its very existence (i.e a modified SIP that allows such an increase) have not yet been approved, and therefore the meeting and request for public comments on a permit which shouldn't have yet been written is premature at best, and possibly not even needed, depending on what happens with the SIP issue.

Since the SIP currently states the limitation is 197 MM tons a year (and not the 260 MM tons/year as the permit is written), there is no way that the DAQ should be proposing and accepted public comment on a permit that is based on this premise.

In a letter from the EPA (to Cheryl Heying, Feb 25, 2011 and copied to me personally) the EPA stated that the SIP modification is troublesome and not likely to be approved. In a letter from the EPA (to Ursula Trueman) June 30, 1999 the EPA had serious problems with a recurring position on the reasons used for the 80% pit retention calculation. The UT DAQ is making the same mistakes that are contributing to the lack our ability to regain attainment.

I am asking the UT DAQ to delay public comment (both verbal and written) until such time that the intent-to-approve permit document is valid under state rules – it currently is NOT unless the AQB approves the SIP change. You should not “intend-to-approve” something that is currently not allowed by their own SIP.

This action invites a legal action suggesting that the DAQ is taking comment on something that has no right in even being discussed officially at public meeting until it's foundational assumption - the SIP – is changed.

This is a battle that we can not loose. It will effect your health, your family, your property, the very air you breath and water you drink.

51 days were Red Alert days, which means 1 in every 7 days senior citizens and children were warned not to go outside.

According to the Utah State Division of Air Quality, Kennecott contributes the majority of pollutants to Salt Lake County. Much of the extremely fine dust is composed of toxic, carcinogenic, and heavy metals that enter the lungs and gets absorbed by the body. Kennecott is requesting a permit to dig an additional 63 million tons a year from the mine into an airshed that has already been declared the "worst air in the nation".

In order for Kennecott Bingham Canyon Mine to expand (Cornerstone) on the southwest section (Butterfield Canyon) they need to obtain approval to proceed with the project. Kennecott has requested that the limit for total material moved be adjusted from 197,000,000 tons per 12 month period to 260,000,000 tons per 12 month period. Any additional mining will increase air pollution.

The only pro statement that could be offered by Kennecott representatives was the contribution of employment to Salt Lake City. Other businesses contributed far more. The top 25 hotels accounted for 5,500 jobs, a considerable amount more that the 2000 jobs Kennecott boasts. When calculating medical data from the effects of Kennecott's pollutants, just as many people are dying or suffering from disease as they employ.

Kennecott made over \$14,000,000 last year. Kennecott's continued statement "Not at this time" does not promote confidence or trust in this company. Kennecott's speaker at the Division of Air Quality last week stated that they continue to monitor the air quality in Herriman, when in fact they pulled that air monitor five years ago. There is no measurement of air quality in the southwest area.

Kennecott's attempts to expand mining operations that effect our health and community MUST BE STOPPED!

Terri Williams

[REDACTED] st

My name is Terri Williams. I am a retired Registered Nurse. I am not an expert in toxic air and water pollution, but I do have a Bachelor of Science degree. It is basic common sense that bringing heavy metals from the earth will bring toxic waste to the environment.

I am not writing on a topic that I am not informed on, but on a personal journey. At the age of 55 years, I was diagnosed with asthma. Growing up in Virginia and living over seas, I finally retired to the Southwest area of Salt Lake County in 2002, not very far from Kennecott's copper mine. I did not do my homework before purchasing my home. Two years later, an acute respiratory infection sent me to the Doctors. It was there, I was told it was not pneumonia, but asthma. A daily dose of medication and inhaler keep it under control except in a few of the winter months: could be caused by the cold, or more likely, the severe pollution experienced in the cold inversions. During my entire life, until moving here, there was never asthma. My eight year old grandson has asthma. He was born in Salt Lake City, lives on the east bench, and has spent many of his days in Rose Canyon at my home. Family history rules out any genetic factors until I developed asthma.

Even more devastating, is the cancer that is shown to be caused by pollution, contaminated water, and toxic metal waste. My 9 year old grandson was diagnosed with an inoperable tumor in his brain stem, a Pontine Intrinsic Difuse Glioma, almost a year ago. There is nothing we can do for him, except trust in our Heavenly Father to take care of him. This may or may not have been caused by the heavy pollution in Salt Lake City, however, we won't know. Once again there is no family history of cancer. There have been three children on the Walsach front

recently diagnosed with the same rare tumor. Two of the children have died. The CDC states "3 of only 250 children in the United States" does not show a cluster, thus it will take longer than 10 years to evaluate. There may be more children out there. I only knew these three to report. It only takes one day spent at Children's Primary Hospital on the Oncologist's unit to know that childhood cancer is horrific. It is overwhelming to see the number of children that are fighting these battles.

Now Kennecott is going to be allowed to increase their number of emissions, expand their waste dumping, and drill into water aquifers. Please stop this large industry from destroying the environment.

Thank you.

Sincerely

Terri Williams

DIVISION OF AIR QUALITY

Dear Ms. Heying:

This letter is in support of Kennecott's efforts to initiate action to physically implement the work on its "Cornerstone Project." Specifically the School and Institutional Trust Lands Administration (SITLA) Supports the Utah Division of Air Quality issuing a permit, in a timely manner, and that the Utah Air Quality Board approve a rule (R307-110-17) to authorize increases in production at the Bingham Canyon Mine to accommodate this planned expansion.

- Although SITA's land ownership position in the specific area that the Cornerstone Project impacts is not large, the overall positive impact of the "economic engine" that the Bingham Canyon mine provides to the economy of the State of Utah is so significant this action should not be delayed.

Kennecott continues to explore the Oquirrh Mountain Range for base and precious metal deposits including targets on SITLA lands. Development and exploitation of these deposits remain possible and practical only if the production from the Bingham Canyon Mine continues.

Thank you for the opportunity to comment on this matter.

Sincerely,

Kevin S. Carter, Director
State of Utah, School and Institutional Trust Lands Administration

Subject: Comments on Proposed Changes to Utah SIP, Section IX.H,
Raising the Allowable Limit on Material Moved at the Bingham Canyon Mine

Dear Members of the Utah Air Quality Board:

Thank you for the opportunity to provide comments on the proposed revisions to the State Implementation Plan.

The City recognizes Kennecott's contribution to our community, both economically and socially, and appreciates the corporation's ongoing moves toward cleaner and more sustainable practices. However, we believe it is critical that DAQ and Kennecott comprehensively assess the valley-wide air quality impacts posed by all of Kennecott's operations, with the objective of aggressively pursuing pollution reduction measures that will help the state and Salt Lake City/County clean up our wintertime air quality to safe levels throughout the City and the valley.

Salt Lake City also recognizes that reducing air pollution in the Salt Lake Valley and along the Wasatch Front requires a multi-faceted approach that includes other sources of pollution including vehicular sources. We have appreciated working with the DAQ, UDOT, Salt Lake County, and other public and private entities in the Clear the Air, TravelWise, and other efforts to address our air quality problems. And, we recognize we have much to do to effectively improve air quality.

Salt Lake City has reviewed the proposed SIP changes, the supporting technical documentation, and the related Notice of Intent and proposed Approval Order for the Bingham Canyon Mine expansion. Based on our review, the City does not believe the effects of this change on our already poor air quality are adequately understood. The City requests that the Board require further analysis of PM_{2.5} air quality impacts from the current and future mine operations prior to making a decision on the proposed SIP revisions. We all breathe the same air in the Salt Lake Valley, and Salt Lake City has a vital interest in the impacts of air quality decisions on the health and well-being of our residents and visitors. Our concerns and recommendations are detailed below.

Salt Lake City, and the larger Salt Lake Valley, are significantly out of compliance with the existing national ambient air quality standard (NAAQS) for PM_{2.5} pollution during the winter inversion season. This winter, there were 15 days when the PM_{2.5} concentrations measured in Salt Lake City exceeded safe levels as defined by the PM_{2.5} NAAQS of 35 ug/m³. The resulting health and economic costs of this pollution to the citizens of Salt Lake City are undeniably high.

Modeling performed in support of the proposed SIP changes documents that the additional material movement at Bingham Canyon Mine will add more PM₁₀ (3 to 10 ug/m³) to the already impacted air throughout the entire Salt Lake Valley. The modeling predicts that the addition of this PM₁₀ pollution puts parts of the Salt Lake Valley dangerously close (within 2 ug/m³) to exceeding the PM₁₀ NAAQS of 150 ug/m³. Of even more concern, most of the PM₁₀ increases result from increases in NO_x pollution, so it appears obvious that the additional material movement will add more PM_{2.5} to impacted air throughout the entire valley. The PM_{2.5} impacts of this increase have not been analyzed or disclosed.

Salt Lake City is extremely concerned that we don't know how the proposed change will add to the already unhealthy air quality in Salt Lake City during the winter months. We do not believe it is prudent, protective, or allowable for the Board to approve a SIP change that is likely to interfere with attainment of an established air quality standard (the 35 ug/m³ NAAQS for PM_{2.5}). We request that the Board require this information be submitted for consideration by DAQ and the Board before making a fully informed decision on the current SIP revision.

The proposal by Kennecott to change the power plant operations from coal to natural gas would improve emission levels for some pollutants. While that improvement is welcome, we request DAQ consider other and additional measures that would further improve our air pollution problems in the Salt Lake Valley. That should include use of renewable resources for power supply by Kennecott as an option and requiring all natural gas power production, energy efficiencies in all operations, and use of best control technologies on all emitting facilities.

With pending changes in EPA standards for CO₂ emissions, it would also seem advisable for the proposed changes in the operations be evaluated for carbon emissions as well. Actions should be considered to help meet State and local goals for carbon emission reductions and achieving renewable energy goals.

We appreciate your thoughtful consideration of our comments.

Sincerely,

Ralph Becker
Mayor

I SUPPORT KENNECOTT

I am in favor of the Utah Division of Air Quality issuing a timely permit and the Utah Air Quality Board approving a rule making (R307-110-17) to authorize a production increase at the Bingham Canyon Mine. I understand this project is out for public comment because Kennecott has fulfilled all regulatory requirements. The Cornerstone Project will make an important contribution to the community and I support timely regulatory approval.
