BACKGROUND

This facility consists of naturally surfacing geothermal spring water that is treated with chlorine and used for a swimming pool and spas. While all of the geothermal water is captured at the spring source, only a portion of the water is chlorinated and used for the pool and spa. Pool water is intermittently pumped to the head of a man made earthen and rock water course through the immediate park area. After running down through the park area, the water commingles with the unused portion of the surfacing spring water, and continues to flow south-east through an earthen and rock ditch to Utah Lake. The facility has a Standard Industrial Classification (SIC) code of 7999, for Amusement and Recreation Services.
