

UTAH STATE IMPLEMENTATION PLAN

CONTROL MEASURES FOR AREA AND POINT SOURCES

SECTION IX PART E

NITROGEN DIOXIDE

IX.E.1

The current National Ambient Air Quality Standards for nitrogen dioxide have been attained and are being maintained throughout the State as shown by ambient air data collected by the monitoring network operated by the Department of Health. EPA is required by the Clean Air Act to develop and promulgate a short term standard for NO₂. It is anticipated that when this standard is promulgated this SIP will be revised to include provision for attainment (if necessary) and maintenance of that standard.
