

## Chapter 2.7 Uinta Watershed Management Unit Water Quality Assessment

### 2.7.1 Introduction

The Uinta Watershed Management Unit lies in northeastern Utah and includes the U.S.G.S. hydrological units listed in Table 2.7.1. This unit includes the Green River and the tributaries streams that flow into it downstream to approximately where the Price River enters the Green River. Tributary streams include those on the north and south slopes of the Uinta Mountains. Major streams on the north slope include the West Fork Blacks Fork, East Fork Blacks Fork, Blacks Fork, West Fork Smiths Fork, East Fork Smiths Fork, Henry’s Fork and Burnt Fork Rivers. Major south slope streams include Currant Creek, Duchesne River, Rock Creek, Lake Fork Creek, Yellowstone River, Uinta River, Ashley Creek, and Brush Creek. Two other major rivers are the Strawberry and White Rivers. The Strawberry River, located in the western part of the management unit, flows east to join the Duchesne River downstream from Starvation Reservoir. The White River flows west from the Utah-Colorado border to join the Green River near the confluence of the Duchesne and Green Rivers. Smaller tributaries to the south include Nine Mile Creek and Range Creek.

<b>Table 2.7.1 . U.S.G.S. Hydrological Units in the Uinta Watershed Management Unit</b>	
<b>Number</b>	<b>Name</b>
14040106	Upper Green-Flaming Gorge Reservoir
14040107	Blacks Fork
14040108	Muddy
14050007	Lower White
14060001	Lower Green-Diamond
14060002	Ashley-Brush
14060003	Duchesne
14060004	Strawberry
14060005	Lower Green - Desolation Canyon
14060006	Willow

### 2.7.2. Water Quality Assessment Results

Data collected from January 1, 2002 through December 31, 2006, including the intensive survey from July 1, 2005 to June 30, 2006 were used to make beneficial use assessments. Figure 2.7.2 is a map of the designated beneficial uses assigned to the rivers and streams in the management unit. Benthic macroinvertebrate data were used to assess some streams (Chapter 2.15).

**2.7.2.1 Assessment by Categories** –Table 2.7.2 is a list of stream miles assigned to the

various assessment categories. The Uinta Watershed Management Unit beneficial use assessment by categories is listed in Table 2.7.2 and mapped in Figure 2.7.3.

<b>Category</b>	<b>Category Definition</b>	<b>Stream Miles</b>
1	All beneficial uses fully supported.	0.0
2	Beneficial uses assessed are fully supported.	2,366.8
3A	No data or insufficient data to make an assessment.	403.6
3B	Lakes that are not supported for one cycle only.	
3C	Insufficient data to assess but an assessment plan is in place.	0.0
4A	Approved TMDL	186.3
4B	Pollution control requirements are expected to result in full beneficial use support in near future.	0.0
4C	Impaired by pollution, no TMDL required.	98.9
5	Impaired by pollutant, TMDL required.	440.3

**2.7.2.2 Overall Beneficial Use Support** --There are an estimated 3,445 perennial stream miles within the Uinta Watershed Management Unit. An assessment of the support of beneficial use was made for 3,013.6 miles. The assessment was based upon at least one beneficial use being assessed. There are 2,366.8 miles (78.5%) listed as fully supporting and 646.74 miles (21.5%) are not supporting at least one designated beneficial use (Figure 2.7.1).

Overall Beneficial Use Support

**2.7.2.3 Individual Use Support**--Use support by individual beneficial use designations is summarized in Table 2.7.3. The drinking water use was assessed on 1,586.4 miles of streams. Of these stream miles, about 1,488.6 miles (93.8%) are supporting this beneficial use and 97.9 miles or 6.2% are not..

Streams classified for agricultural use have 2,356.1 miles (89.8 %) that are supported and 266.7 miles (10.2%) that are not supporting agricultural usage.

Figure 2.7.1. Overall beneficial use support – Uinta.

A total of 2,957.0 stream miles were assessed for aquatic life, of which 2,553.2 (88.2%) are supporting this beneficial use. A total of 403.8 miles (11.8%) are not supporting.

<b>Table 2.7.3. Individual Beneficial Use Support – Uinta Watershed Management Unit</b>				
	<b>Size</b>	<b>Size Fully</b>	<b>Size Not</b>	
	<b>Assessed</b>	<b>Supporting</b>	<b>Supporting</b>	
<b>Use</b>				
Aquatic Life	3,092.2	2,553.2	403.9	3,092.2
Fish Consumption	0.0	0.0	0.0	0.00
Swimming	0.0	0.0	0.0	0.00
Secondary Contact	0.0	0.0	0.0	0.00
Drinking Water	1,586.5	1,488.6	97.9	1,586.47
Agricultural	2,622.8	2,356.1	266.7	2,622.84
<b>Use</b>				
Aquatic Life		77.6%	22.4%	100.0%
Fish Consumption		0.0%	0.0%	0.0%
Swimming		0.0%	0.0%	0.0%
Secondary Contact		0.0%	0.0%	0.0%
Drinking Water		93.8%	6.2%	100.0%
Agricultural		89.9%	10.2%	100.0%

**2.7.2.4 Total Waters Impaired by Various Causes** – Stream miles impacted by specific causes are summarized in Table 2.7.4. The causes of water quality impairment are metals, total dissolved solids, thermal modifications, habitat and flow alterations. The impact of causes are illustrated in Figure 2.7.4 and the relative impact is illustrated in Figure 2.7.5.

**2.7.2.5 Total Waters Impaired by Various Sources** – Stream miles impacted by source categories are summarized in Table 2.7.5. The sources of impairment are agricultural activities, unknown and natural sources, habitat and hydromodification, and industrial and municipal discharges (Figure 2.7.6). The relative percent impact by each source is illustrated in Figure 2.7.7.
