Evaluation of UDEQ Water Quality Data Collected during Spring Runoff following the Gold King Mine Release

Data Collected: February 16, 2016 – June 6, 2016

Prepared and Reviewed by:

Utah Department of Environmental Quality, Division of Water Quality

Introduction

DEQ collected water samples weekly at seven different locations on the San Juan River and two tributaries, McElmo Creek and Montezuma Creek during the months of February, March, April, and the first week of June, 2016. These data were screened against recreational, drinking water, agricultural, and aquatic life criteria with exceedences shown in orange in the following tables. In addition to the regular exceedance of aluminum criteria for aquatic life and total dissolved solids for agricultural uses, molybdenum was exceeded once for agriculture at the Montezuma Creek monitoring location. No other exceedences of criteria were identified.

Standards and Screening Values used in Evaluation of San Juan River Water Quality Samples and Finished Water Data

The table below summarizes applicable water quality standards for the San Juan River (R317-2-14), Utah's drinking water standards (R309-200-5) applicable to public drinking water systems regulated by the State of Utah, as well as screening values for recreational and agricultural uses. Recreational screening values were developed by the Utah Department of Health's [Environmental Epidemiology Program](#) (EEP). These values reflect the water contaminant concentrations that would exceed established ATSDR minimal risk levels (MRL), or EPA reference doses (RfD) if an appropriate MRL does not exist, for the most susceptible population: children under the age of five years. These recreational screening values assume an exposure duration of 60 days, with two hours/day spent in the water. The accidental ingestion rate accounts for 50 mL of river water per hour, and total body contact with the water for that two hour time period. An exceedance of these values does not necessarily indicate that adverse health effects will occur; rather, it is used as guidance for health professionals to further determine the likelihood that adverse health effects may occur due to the exposure. Agricultural screening values are derived from National Academy of Science (NAS) Water Quality Criteria, 1972 (the Blue Book). Those guidelines are reprinted in [EPA's Guidelines for the Reuse of Waters for Irrigation](#). Dissolved metal values were used for the assessment of agricultural use waters. Estimated results values below the laboratory's reporting limit are evaluated in this analysis. These results generally show low level concentrations and do not significantly affect the analysis outcome.

Domestic Source Water Quality Criteria - Dissolved Metals

Comparison of San Juan River, McElmo Creek, and Montezuma Creek Raw Water Data with Water Quality Standards (R317-2-14) for Domestic Source Water - Dissolved Metals

The dissolved water concentrations of metals and metalloids were compared to the Utah's water quality standards for the Class 1C use of protected for domestic purposes with prior treatment by treatment processes as required by the Utah Division of Drinking Water. No samples exceeded standards for domestic source water.

Aquatic Life Water Quality Criteria

Comparison of San Juan River, McElmo Creek, and Montezuma Creek Raw Water Data with Water Quality Criteria (R317-14-2) for Aquatic Life Use (Warm-water Fishery) – Dissolved Metals

The water concentrations of metals and metalloids were compared to Utah's chronic and acute water quality standards for the Class 3B aquatic life use. All of Utah's aquatic life criteria are based on dissolved fractions with the exception of aluminum which is based on total recoverable fraction. The chronic aluminum standard was exceeded at all sample locations on almost all dates although maximum concentrations were not as high as the previous summary report where values exceeded 100,000 µg/L at the Stateline, Montezuma, Sand Island, Mexican Hat, and Clay Hills sites.

No other exceedances of aquatic life criteria were observed however the analytical method used for mercury does not have sufficient sensitivity and the detection limit is higher than the standard. Therefore, all nondetect concentrations are too high to determine if the water concentrations comply with the standard and this remains a significant uncertainty.

Aquatic Life Water Quality Criteria

Aquatic Life Use (Dissolved Metals)

Recreational Water Screening Values - Total Metals

Comparison of San Juan River Raw Water Data with Recreational Water Screening Values - Total Metals

The Utah Department of Health's Environmental Epidemiology Program (EEP) has generated site-specific recreational screening values for metals and metalloid exposures to the San Juan River waters. These values reflect the water contaminant concentrations that would exceed established ATSDR minimal risk levels (MRL), or EPA reference doses (RfD) if an appropriate MRL does not exist, for the most susceptible population: children under the age of five years.

These recreational screening values assume an exposure duration of 60 days, with two hours/day spent in the water. The accidental ingestion rate accounts for 50 mL of river water per hour, and total body contact with the water for that two hour time period. An exceedance of these values does not necessarily indicate that adverse health effects will occur; rather, it is used as guidance for health professionals to further determine the likelihood that adverse health effects may occur due to the exposure.

No metal or metalloid exceeded a recreational screening value. Recreational exposures to San Juan River water is not expected to harm people's health.

Summary of Recreational Screening Values						
Contaminant	CV (µg/L)	Source	MRL (mg/kg/day)	Type	Screening Value	Units
Aluminum	10,000	I. EMEG	1.00E+00	Chronic	620,767	µg/L
Antimony	4	RMEG	4.00E-04	RfD	248	µg/L
Arsenic	3	C. EMEG	3.00E-04	Chronic	186	µg/L
Barium	2,000	I. EMEG	2.00E-01	Chronic	124,159	µg/L
Beryllium	20	C. EMEG	2.00E-03	Chronic	1,242	µg/L
Cadium	5	I. EMEG	1.00E-04	Chronic	62	µg/L
Chromium	60	Cr(VI) RSL	9.00E-04	Cr(VI) Chr.	410	µg/L
Cobalt	100	I. EMEG	1.00E-02	Intermediate	7,931	µg/L
Copper	100	I. EMEG	1.00E-02	Intermediate	6,208	µg/L
Iron	14,000	RSL	8.75E-01	UDOH	851,582	µg/L
Lead	15	RSL	9.37E-04	UDOH	910	µg/L
Manganese	500	RMEG	5.00E-02	RfD	31,040	µg/L
Mercury	0.63	RSL	2.00E-03	Intermediate	1,242	µg/L
Molybdenum	50	RMEG	5.00E-03	RfD	3,104	µg/L
Nickel	200	RMEG	2.00E-02	RfD	17,480	µg/L
Selenium	50	RMEG	5.00E-03	Chronic	3,104	µg/L
Silver	50	RMEG	5.00E-03	RfD	3,630	µg/L
Thallium	0.2	RSL	4.00E-05	PPRTV subchronic RfD	25	µg/L
Vanadium	100	I. EMEG	1.00E-02	Intermediate	6,208	µg/L
Zinc	3,000	I. EMEG	3.00E-01	Chronic	217,786	µg/L

Recreational Water Screening Values - Total Metals

Screening Value Calculations

Adapted from standard ATSDR exposure dose equations for ingestion and dermal exposures.

$$C = \frac{ED \times BW_i \times BW_d}{(BW_d \times IR_i \times EF_i \times CF_i) + (BW_i \times P_d \times SA_d \times ET_d \times CF_d)} ; \text{ where}$$

- C Concentration (mg/L) – these calculated values are converted to µg/L for screening values where appropriate.
 ED Exposure dose (mg/kg/day)
 BW_i Child body weight for ingestion (16 kg)
 BW_d Child body weight for dermal (30kg)
 IR_i Intake rate for ingestion (0.1 L/day)
 EF_i Exposure factor for ingestion (0.1644 = 60 days/year)
 CF_i Conversion factor, ingestion (1 for mg/L entries)
 SA_d Surface area (whole body, which is 8,750 cm² for children)
 ET_d Exposure time (2 hour/day)
 CF_d Conversion factor, dermal (0.001 for mg/L)
 P_d Permeability coefficient (see table below)

Permeability coefficients	
Aluminum	1.00E-03 (EPA Dermal Exposure Assessment ; EPA RAGS part E Exhibit 3-1)
Antimony	1.00E-03
Arsenic	1.00E-03
Barium	1.00E-03
Beryllium	1.00E-03
Cadmium	1.00E-03
Chromium VI	2.00E-03
Cobalt	4.00E-04 (EPA RAGS part E Exhibit 3-1)
Copper	1.00E-03
Iron	N/A
Lead	4.00E-06
Manganese	1.00E-03
Mercury	1.00E-03 (EPA RAGS part E Exhibit 3-1)
Molybdenum	1.00E-03 (Table 8 from a contractor-derived HHRA for CalDOT ; EPA RAGS part E Exhibit 3-1)
Nickel	2.00E-04
Selenium	1.00E-03
Silver	6.00E-04
Thallium	1.00E-03
Vanadium	1.00E-03
Zinc	6.00E-04

Agricultural Screening Values – Dissolved Metals

Comparison of San Juan River Raw Water Data with Screening Values for Agricultural Uses (Stock watering and Irrigation) – Dissolved Metals

The dissolved water concentrations of metals and metalloids were compared to screening values, including Utah's water quality standards for the Class 4 protected for agricultural uses including irrigation of crops and stock watering. Results are below the screening values for most metals and metalloids. The Utah agricultural water quality standard for total dissolved solids was exceeded on most sampling dates at the McElmo Creek and Montezuma Creek tributary sites. Additionally, one exceedance of the molybdenum agricultural use criteria was observed at the Montezuma Creek monitoring location.

Agricultural Screening Values – Dissolved Metals
