

ATTACHMENT II-1-11

MIXED WASTE TREATMENT BUILDING OPERATING PLAN

1. Mixed waste management operations may be conducted in the Mixed Waste Treatment Building in accordance with this Attachment. All storage and treatment waste management practices which are approved by the Permit may be conducted within the Mixed Waste Treatment Building, unless the Permit expressly prohibits such waste management practice.
2. Processing of waste within the Mixed Waste Treatment Building using waste management units, including miscellaneous units, shall be limited to no more than 300 tons per day. If a waste is processed through several units in series, the total throughput for the process stream shall be counted only once.
3. Waste management activities shall be in accordance with the appropriate attachment for the activity, i.e., stabilization, shredding, etc.
4. Waste management activities which involve the management of waste in units, including miscellaneous units, shall not be performed unless the Fire Suppression System and the HVAC system are operating. Operation of the HVAC system includes operation of the bag house, and the HEPA filtration system. Operation of the HVAC system shall be performed by trained operators in accordance with the Permittee's Standard Operating Procedures.
5. All employees required to operate, maintain or inspect the HVAC system shall be trained in accordance with Attachment II-4, *Personnel Training Plan*.
6. The volatile organic content of waste processed through miscellaneous units within the Mixed Waste Treatment Building shall be limited to concentrations that maintain the cancer risk and non-cancer Hazard Index requirements of Condition II.T.4. Appropriate control equipment shall be utilized to maintain these risks
7. Waste processed in the Mixed Waste Treatment Building shall be evaluated for worker exposures to hazardous constituents of the waste to assure that the operations will comply with OSHA regulations. The appropriate level of worker protection will be assessed on the basis of the expected exposure, in addition to an evaluation of other operations which may occur concurrently with the evaluated activity, and other health and safety factors which may affect worker protection.
