RE: Sigurd North Quarry Solid Waste Landfill Closure Report

Dear Mr. Howard,

This letter and attached photolog will serve as the Solid Waste Landfill Closure Report for the Georgia-Pacific Gypsum LLC (GP) North Quarry Landfill (Permit by Rule, DOGM M/041/009) in Sevier County, Utah.

In October and November 2020, GP transferred the remaining gypsum waste material (approximately 34,000 cubic yards) from the GP plant at 200 South State Street in Sigurd, Utah, to the North Quarry Landfill. GP then closed the North Quarry Landfill in accordance with the Closure Plan, approved by the Utah Division of Waste Management and Radiation Control (DWMRC) in 2017. The following activities were conducted as part of the closure in December 2020:

- Capped with 18 inches of DWMRC approved native material near the quarry
- Graded the crest (northern end) of the landfill slope and constructed a rip rap lined drainage pathway
- Constructed an additional rip rap-lined drainage pathway across the center of the landfill
- Placed rip rap in a meandering pattern on the east side of the landfill
- Placed rip rap at the toe (southern end) of the landfill
- Seeded with native seed (occurred in February 2021)

Doug Taylor from DWMRC visited the facility three times to watch and observe the gypsum transfer to the North Quarry Landfill, and the subsequent landfill closure in 2020. Doug also visited the site on 1 April 2021 to inspect the reseeding and to verify the seeds on the ground.

We understand that once this closure report has been approved by the DWMRC, GP will begin post-closure requirements as specified in the approved Post-Closure Plan.

If you have any questions, I can be reached at (435) 201-2341.

Sincerely,

Georgia-Pacific Gypsum LLC

Shannon Perez, Remediation Project Manager
