BACKGROUND

Chevron is a petroleum refinery facility located at 685 South Chevron Way, North Salt Lake City. It has a Standard Industrial Classification (SIC) code 2911, for petroleum refining. As part of the renewal process, Chevron has completed and submitted an Effluent Screening Report to determine if additional effluent limits are needed to protect the beneficial use of the receiving water. The report demonstrates that the effluent from this facility will not cause or contribute to violation of water quality standards. Therefore, the effluent limits, based on water quality standards, in the renewal permit are the same as in the previous permit. However, additional data needed to complete a full reasonable potential analysis.
