

**STATE OF UTAH  
DIVISION OF WATER QUALITY  
DEPARTMENT OF ENVIRONMENTAL QUALITY  
SALT LAKE CITY, UTAH**

**§401 Water Quality Certification No. DWQ-2019-05001**

Pursuant to §401 of the Federal Clean Water Act(CWA), the Utah Department of Environmental Quality (DEQ), Division of Water Quality (DWQ) certifies that the applicant has provided reasonable assurance that any discharges associated with the proposed project will not violate surface water quality standards, or cause additional degradation in surface water not presently meeting water quality standards. In accordance with Section 401(a)(1) of the CWA [33 U.S.C. Sec. 1341(a)(1)], DWQ hereby issues this §401 Water Quality Certification provided any listed conditions are met and included in the corresponding U.S. Army Corps of Engineers (USACE) 404 Permit.

**Applicant:** Utah Division of Wildlife Resources  
Mr. Stan Beckstrom  
1470 N. Airport Rd.  
Cedar City, UT 84721

**Project:** The applicant is proposing to make improvements to the existing marinas, which may include increasing the number of boat slips by improving or constructing new dikes, constructing new boat ramps, improving and expanding parking lot areas and access roads, constructing stormwater control features, adding pit toilets, and adding electrical conduit for future lighting and charging stations. The existing marina facilities at Lakeside Marina, and Bowery Haven Marina are not able to meet current demand based on number of visitors and size of boats. The facilities are in poor condition and present safety hazards for those who use them. The existing launch ramps are deteriorating, which creates unsafe conditions and may damage boat trailers. Many of the docks are narrow and made of wood; this results in unstable and slippery conditions, and high maintenance efforts. Many dock anchor points are substandard, creating unsafe conditions and frequent maintenance needs. The dikes, which are used to access some of the slips, have uneven surfaces and are overtopped at times. Large rocks in and around the marina entrances present a hazard to boaters.

**Location:** Along the Northwest and Southwest shoreline of Fish Lake: Bowery Haven 38.5617°, -111.7061°; Lakeside 38.5351°, -111.7360°, Fishlake National Forest, Sevier County, Utah

**Watercourse(s):** Fish Lake

**Effective Date:** **June X, 2019**

## **I. Background**

### **A. Other Applicable Permits**

1. USACE 404 Permit: SPK-1995-50647 & SPK-2019-00295
2. U.S. Forest Service Special Use Permit

### **B. Project Description/Purpose**

The applicant is proposing to make improvements to the existing marinas, which may include increasing the number of boat slips by improving or constructing new dikes, constructing new boat ramps, improving and expanding parking lot areas and access roads, constructing stormwater control features, adding pit toilets, and adding electrical conduit for future lighting and charging stations. The existing marina facilities at Lakeside Marina, and Bowery Haven Marina are not able to meet current demand based on number of visitors and size of boats. The facilities are in poor condition and present safety hazards for those who use them. The existing launch ramps are deteriorating, which creates unsafe conditions and may damage boat trailers. Many of the docks are narrow and made of wood; this results in unstable and slippery conditions, and high maintenance efforts. Many dock anchor points are substandard, creating unsafe conditions and frequent maintenance needs. The dikes, which are used to access some of the slips, have uneven surfaces and are overtopped at times. Large rocks in and around the marina entrances present a hazard to boaters.

## II. Certification Conditions

### A. Project Specific Conditions

#### 1. Best Management Practices (BMPS)/Requested Actions

- a. A turbidity curtain will be installed around the marinas, when any dredging, dike construction, or in-water work is occurring. The curtains should not be removed until the turbidity in the marina is not more than 10 NTUs greater than the lake.
- b. If any dredged material is removed from the lake and stored on land, the material must be protected or stored in a way as to prevent reentry into the lake.
- c. Construction machinery used should be clean to prevent the possible transfer of Aquatic Invasive Species.
- d. Ample effort should be made to remove fish from the marinas before dredging and dike construction work begins.

#### 2. Reporting

- a. If the USACE requires mitigation, the final plan shall be sent to the DWQ for our records. Any reports that may be required as part of the mitigation, shall additionally be sent to the DWQ.

### B. General Conditions

#### 1. Good Housekeeping

- a. Applicant and their subcontractors shall ensure that all workers involved are continuously aware of the water quality protection measures before the start and during the construction period.
- b. Retain a copy of this §401 Certification and its affiliated USACE 404 Permit onsite.

## 2. Stormwater and BMPs

- a. Water quality standards in associated water resources could be violated unless appropriate Best Management Practices (BMPs) are incorporated to minimize the erosion-sediment and nutrient load to any adjacent waters during project construction. The applicant shall not use any fill material which may leach organic chemicals (e.g. discarded asphalt), noxious weeds/seeds or nutrients (e.g., phosphate rock) into waters of the State.
- b. Construction activities that disturb one acre or more, or are part of a common plan of development, are required to obtain coverage under the Utah Pollutant Discharge Elimination System (UPDES) Stormwater General Permit for Construction Activities, Permit No. UTR300000<sup>[1]</sup>. The permit requires the development of a Storm Water Pollution Prevention Plan (SWPPP) to be implemented and updated from the commencement of any soil disturbing activities at the site, until final stabilization of the project. The SWPPP should include, but not limited to, final site maps and legible plans, location of stormwater outfalls/discharges, as well as information pertaining to any stormwater retention requirements.
- c. Dewatering activities, if necessary during construction, may require coverage under the UPDES General Permit for Construction Dewatering, Permit No. UTG070000<sup>[2]</sup>. The permit requires water quality monitoring every two weeks to ensure that the pumped water is meeting permit effluent limitations, unless water is contained onsite.
- d. A project within a Municipal Separate Storm Sewer System (MS4) jurisdiction, must comply with all the conditions required in that UPDES MS4 Permit and associated ordinances. No condition of this 401 Certification shall reduce or minimize any requirements provided in the MS4 Permit. In the case of conflicting requirements, the most stringent criteria shall apply.
- e. Utah Administrative Code R317-2 requires that the Applicant cannot increase water turbidity by 10 NTUs. If violated shall immediately notify the DWQ. A fact sheet describing the Utah Department of Environmental Quality's (DEQ) recommended environmental BMPs for construction sites are located on our web site <sup>[3]</sup>.

### 3. Spills

- a. Refueling equipment and storage of lubricants and fuels will occur at designated staging areas and in state approved containers. The storage and refueling areas will be at least 500 feet from the edge of the nearest waterbody (including wetlands), at least 200 feet from the nearest private water supply well, and at least 100 feet from the nearest municipal water supply well.
- b. Utah Annotated Code 19-5-114 requires that any spill or discharge of oil or other substances which may cause pollution to waters of the State, including wetlands, must be immediately reported to the Utah DEQ Spill Hotline at (801) 536-4123, a 24-hour phone number.

P/N D R A F T

### **III. Aquatic Resource Impacts**

All Waters of the State of Utah (defined in Administrative Code (UAC) R317-1-1) are protected from pollutant discharges that affect water quality by narrative standards (see UAC R317-2-7.2); broadly, discharges should not become offensive or cause undesirable conditions in human health effects of aquatic life. In addition, some particularly sensitive classes of water are further protected from deleterious effects of specific pollutants by application of numeric criteria to designated (beneficial) uses of that water body. Listed below are the water features within the project area and their associated designated beneficial uses (see UAC R317-2-6):

#### **A. Impacts to Water Features**

##### **1. Fish Lake**

- a. **Class 2B**: Protected for infrequent primary contact recreation. Also protected for secondary contact recreation where there is a low likelihood of ingestion of water or a low degree of bodily contact with the water. Examples include, but are not limited to, wading, hunting, and fishing.
- b. **Class 3A**: Protected for cold water species of game fish and other cold water aquatic life, including the necessary aquatic organisms in their food chain.
- c. **Class 4**: Protected for agricultural uses including irrigation of crops and stock watering

#### **IV. Modifications**

- A. Without limiting DWQ's discretion to take other actions in accordance with UAC R317-15, and, as applicable, 33 USC 1341, DWQ may modify the Certification to add, delete, or modify the conditions in this Certification as necessary and feasible to address:
1. Adverse or potential adverse project effects on water quality of designated beneficial uses that did not exist or were not reasonably apparent when this certification was issued;
  2. TMDLs;
  3. Changes in Water quality standards;
  4. Any failure of Certification conditions to protect water quality or designated uses when the Certification was issued; or
  5. Any change in the Project or its operations that will adversely affect water quality of designated beneficial uses when this Certification was issued.

## V. Other Information

### A. Fees

1. The legislatively-mandated fee for the 2019 fiscal year is \$100.00/hour, for review and issuance of the §401 Water Quality Certification [<sup>4</sup>]. A quarterly invoice will be sent once plans have been approved. Your payment is due within 30 days.

### B. Liabilities

1. Applicant must acquire all necessary easements, access authorizations and permits to ensure they are able to implement the project. This §401 Certification does not convey any property rights or exclusive privileges, nor does it authorize access or injury to private property.
2. This §401 Certification does not preclude the applicant's responsibility of complying with all applicable Federal, State or local laws, regulations or ordinances, including water quality standards. Permit coverage does not release the applicant from any liability or penalty, should violations to the permit terms and conditions or Federal or State Laws occur.
