WASTELOAD ANALYSIS [WLA] Addendum: Statement of Basis

Facilities: Emery County Coal Resources, Inc. – Princess Mine (aka Crandall Canyon Mine), UPDES No: UT-0024368

Discharging to: Huntington Creek

I. Introduction

Wasteload analyses are performed to determine point source effluent limitations necessary to maintain designated beneficial uses by evaluating projected effects of discharge concentrations on in-stream water quality. The wasteload analysis also takes into account downstream designated uses [R317-2-8, UAC]. Projected concentrations are compared to numeric water quality standards to determine acceptability. The anti-degradation policy and procedures are also considered. The primary in-stream parameters of concern may include metals (as a function of hardness), total dissolved solids (TDS), total residual chlorine (TRC), un-ionized ammonia (as a function of pH and temperature, measured and evaluated interms of total ammonia), and dissolved oxygen.

Mathematical water quality modeling is employed to determine stream quality response to point source discharges. Models aid in the effort of anticipating stream quality at future effluent flows at critical environmental conditions (e.g., low stream flow, high temperature, high pH, etc).

The numeric criteria in this wasteload analysis may always be modified by narrative criteria and other conditions determined by staff of the Division of Water Quality.

II. Receiving Water and Stream Classification

Huntington Creek:	1C, 2B, 3A, 4
Antidegradation Review:	Level I review completed. Level II review not required.

III. Numeric Stream Standards for Protection of Aquatic Wildlife

Total Ammonia (TNH3)	Varies as a function of Temperature and pH Rebound. See Water Quality Standards
Chronic Total Residual Chlorine (TRC)	0.011 mg/l (4 Day Average) 0.019 mg/l (1 Hour Average)
Chronic Dissolved Oxygen (DO)	6.50 mg/l (30 Day Average) 9.50 mg/l (7Day Average) 8.00 mg/l (1 Day Average
Maximum Total Dissolved Solids	1200.0 mg/l

Acute and Chronic Heavy Metals (Dissolved)

There are additional standards that apply to this receiving water, but were not considered in this modeling/waste load allocation analysis.

VII. Mathematical Modeling of Stream Quality

Model configuration was accomplished utilizing standard modeling procedures. Data points were plotted and coefficients adjusted as required to match observed data as closely as possible.

The modeling approach used in this analysis included one or a combination of the following models.

(1) The Utah River Model, Utah Division of Water Quality, 1992. Based upon STREAMDO IV (Region VIII) and Supplemental Ammonia Toxicity Models; EPA Region VIII, Sept. 1990 and QUAL2E (EPA, Athens, GA).

- (2) Utah Ammonia/Chlorine Model, Utah Division of Water Quality, 1992.
- (3) AMMTOX Model, University of Colorado, Center of Limnology, and EPA Region 8
- (4) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

Coefficients used in the model were based, in part, upon the following references:

(1) Rates, Constants, and Kinetics Formulations in Surface Water Quality Modeling. Environmental Research Laboratory, Office of Research and Development, U.S. Environmental Protection Agency, Athens Georgia. EPA/600/3-85/040 June 1985.

(2) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

VIII. Modeling Information

The required information for the model may include the following information for both the upstream conditions at low flow and the effluent conditions:

Flow, Q, (cfs or MGD)	D.O. mg/l
Temperature, Deg. C.	Total Residual Chlorine (TRC), mg/l
рН	Total NH3-N, mg/l
BOD5, mg/l	Total Dissolved Solids (TDS), mg/l
Metals, ug/l	Toxic Organics of Concern, ug/l

Other Conditions

In addition to the upstream and effluent conditions, the models require a variety of physical and biological coefficients and other technical information. In the process of actually establishing the permit limits for an effluent, values are used based upon the available data, model calibration, literature values, site visits and best professional judgement.

Model Inputs

The following is upstream and discharge information that was utilized as inputs for the analysis. Dry washes are considered to have an upstream flow equal to the flow of the discharge.

•	am Information tream Critical							
	Low Flow	Temp.	рН	T-NH3	BOD5	DO	TRC	TDS
	cfs	Deg. C		mg/I as N	mg/l	mg/l	mg/l	mg/l

All Seasons	0.0795*	0.795*	1.59*	0.15*	0.0795*	1.59*	* ~80)% MDL

Projected Discharge Information

Season	Flow, MGD	Temp.
Summer	0.73000	14.1
Fall	0.73000	10.3
Winter	0.73000	10.5
Spring	0.73000	12.8

All model numerical inputs, intermediate calculations, outputs and graphs are available for discussion, inspection and copy at the Division of Water Quality.

IX. Effluent Limitations

Current State water quality standards are required to be met under a variety of conditions including in-stream flows targeted to the 7-day, 10-year low flow (R317-2-9).

Other conditions used in the modeling effort coincide with the environmental conditions expected at low stream flows.

Effluent Limitation for Flow based upon Water Quality Standards

In-stream criteria of downstream segments will be met with an effluent flow maximum value as follows:

Season	Daily Average	
Summer Fall Winter	0.730 MGD 0.730 MGD 0.730 MGD	1.129 cfs 1.129 cfs 1.129 cfs
Spring	0.730 MGD	1.129 cfs

Flow Requirement or Loading Requirement

The calculations in this wasteload analysis utilize the maximum effluent discharge flow of 0.73 MGD. If the discharger is allowed to have a flow greater than 0.73 MGD during 7Q10 conditions, and effluent limit concentrations as indicated, then water quality standards will be violated. In order to prevent this from occuring, the permit writers must include the discharge flow limititation as indicated above; or, include loading effluent limits in the permit.

Effluent Limitation for Whole Effluent Toxicity (WET) based upon WET Policy

Effluent Toxicity will not occur in downstream segements if the values below are met.

WET Requirements	LC50 >	100.0% Effluent	[Acute]
	IC25 >	1.9% Effluent	[Chronic]

Effluent Limitation for Dissolved Oxygen (DO) based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Oxygen will be met with an effluent D.O. limitation as follows:

Season	Concentration
Summer	6.50
Fall	6.50
Winter	6.50
Spring	6.50

Effluent Limitation for Total Ammonia based upon Water Quality Standards

In-stream criteria of downstream segments for Total Ammonia will be met with an effluent limitation (expressed as Total Ammonia as N) as follows:

Season					
		Concentration		Load	d
Summer	4 Day Avg Chronic	46.78	3 mg/l as N	284.7	lbs/day
	1 Hour Avg Acute	28.6	mg/I as N	174.3	lbs/day
Fall	4 Day Avg Chronic	145.4	mg/I as N	885.1	lbs/day
	1 Hour Avg Acute	104.0	mg/I as N	632.9	lbs/day
Winter	4 Day Avg Chronic	145.4	mg/l as N	885.1	lbs/day
	1 Hour Avg Acute	104.0	mg/I as N	632.9	lbs/day
Spring	4 Day Avg Chronic	47.4	mg/I as N	288.5	lbs/day
	1 Hour Avg Acute	29.7	mg/I as N	180.5	lbs/day

Acute limit calculated with an Acute Zone of Initial Dilution (ZID) to be equal to 50.%.

Effluent Limitations for Total Dissolved Solids based upon Water Quality Standards

Seaso	on	Concentration	Load
Summer Fall Winter Spring	Maximum, Acute Maximum, Acute Maximum, Acute Maximum, Acute	53527.9 mg/l 53527.9 mg/l 53527.9 mg/l 53527.9 mg/l	162.91 tons/day 162.91 tons/day 162.91 tons/day 162.91 tons/day 162.91 tons/day 162.91 tons/day
Colorado Sa	linity Forum Limits	Determined by Permitting S	Section

Effluent Limitations for Total Recoverable Metals based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Metals will be met with an effluent limitation as follows (based upon a hardness of 398.97 mg/l):

		4 Day Average				1 Hour	Average		
	Conce	ntration	Loa	ıd	Concentra	tion		Load	l
Aluminum*	N/A		N/A		20,2	46.2	ug/l	123.2	lbs/day
Arsenic*	10,058.13	ug/l	39.6 I	bs/day	9,1	85.7	ug/l	55.9	lbs/day
Cadmium	35.95	ug/l	0.1 I	bs/day	2	33.7	ug/l	1.4	lbs/day
Chromium III	14,185.86	ug/l	55.8 l	bs/day	151,6	10.8	ug/l	922.9	lbs/day

Effluent Targets for Pollution Indicators Based upon Water Quality Standards

In-stream criteria of downstream segments for Pollution Indicators will be met with an effluent limit as follows:

	1 Hour Average	
	Concentration	Loading
Gross Beta (pCi/l)	50.0 pCi/L	
BOD (mg/l)	5.0 mg/l	30.4 lbs/day
Nitrates as N	4.0 mg/l	24.3 lbs/day
Total Phosphorus as P	0.05 mg/l	0.3 lbs/day
Total Suspended Solids	90.0 mg/l	547.8 lbs/day

Note: Pollution indicator targets are for information purposes only.

Effluent Limitations for Protection of Human Health [Toxics Rule] Based upon Water Quality Standards (Most stringent of 1C or 3A & 3B as appropriate.)

In-stream criteria of downstream segments for Protection of Human Health [Toxics] will be met with an effluent limit as follows:

with an effluent limit as follows:		
		Maximum Concentration

Summary Effluent Limitations for Metals [Wasteload Allocation, TMDL]

[If Acute is more stringent than Chronic, then the Chronic takes on the Acute value.]

	WLA Acute ug/l	WLA Chronic ug/l	
Aluminum	20246.2	N/A	
Antimony	744.18		
Arsenic	2616.3	10058.1	Acute Controls
Asbestos	3.72E+08		
Barium			
Beryllium			
Cadmium	233.7	36.0	
Chromium (III)	151610.8	14186	
Chromium (VI)	329.6	377.4	Acute Controls
Copper	1375.4	1576.2	Acute Controls
Cyanide	595.7	276.4	
Iron	30542.5		
Lead	5274.1	943.0	
Mercury	3.295	-3.509	
Nickel	32425.0	8898	
Selenium	500.1	161.6	
Silver	1107.2	N/A	
Thallium	90.4		
Zinc	10476.6	20566.2	Acute Controls
Boron	39866.81		
Sulfate	106311.5		N/A at this Waterbody

Other Effluent Limitations are based upon R317-1. E. coli

126.0 organisms per 100 ml

X. Antidegradation Considerations

The Utah Antidegradation Policy allows for degradation of existing quality where it is determined that such lowering of water quality is necessary to accommodate important economic or social development in the area in which the waters are protected [R317-2-3]. It has been determined that certain chemical parameters introduced by this discharge will cause an increase of the concentration of said parameters in the receiving waters. Under no conditions will the increase in concentration be allowed to interfere with existing instream water uses.

An Antidegradation Level I Review was conducted on this discharge and its effect on the receiving water. Based upon that review, it has been determined that an Antidegradation Level II Review is not required.

XI. Colorado River Salinity Forum Considerations

Discharges in the Colorado River Basin are required to have their discharge at a TDS loading of less than 1.00 tons/day unless certain exemptions apply. Refer to the Forum's Guidelines for additional information allowing for an exceedence of this value. This doesn't apply to facilities that do not discharge to the Colorado River Basin.

XII. Summary Comments

The mathematical modeling and best professional judgement indicate that violations of receiving water beneficial uses with their associated water quality standards, including important downstream segments, will not occur for the evaluated parameters of concern as discussed above if the effluent limitations indicated above are met.
