ATI Titanium utilizes treated groundwater to produce titanium sponge. The treated effluent will then be discharged to the Great Salt Lake. The water is obtained from wells in Skull Valley and then is treated by Reverse Osmosis and distributed to the facilities. ATI Titanium is anticipating average effluent flows from the titanium metal sponge manufacturing plant at 750,000 gallons per day (gpd) of treated effluent. The wastewater consists of approximately 440,000 gpd of non-contact sources and 290,000 gpd of contact water
