FACT SHEET/STATEMENT OF BASIS

GENERAL MULTI-SECTOR PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITY (MSGP)
PERMIT NUMBER UTR000000

GROUP 2-PERMIT RENEWAL (SECTORS I, R, AB, AC)

JANUARY 1, 2020

STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITY FROM OIL OR GAS EXTRACTION FACILITIES, SHIP OR BOAT BUILDING AND REPAIR YARDS, FACILITIES THAT MANUFACTURE TRANSPORTATION EQUIPMENT, INDUSTRIAL OR COMMERCIAL MACHINERY, ELECTRONIC AND ELECTRICAL EQUIPMENT AND COMPONENTS, PHOTOGRAPHIC AND OPTICAL GOODS.

GENERAL DESCRIPTION OF DISCHARGES AUTHORIZED UNDER THE MULTI SECTOR GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITY:
Storm water drainage areas covered by these sectors in the permit include but are not limited to discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters; sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and finished products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water. Areas on industrial sites which are not regulated and need not be included in this permit (providing the storm water from these areas do not mix with storm water from regulated areas) are any undisturbed areas, office complexes not immediately connected with other industrial areas, and parking lots for office complexes (unless industrial materials or equipment travel over these parking lots).

This permit regulates storm water only. A facility may have other permitted discharges at the site such as process water covered under a separate UPDES permit. Also allowed in a storm water discharge under this permit are discharges from emergency fire-fighting activities; fire hydrant flushings; potable water sources including waterline flushings; drinking fountain water; irrigation drainage; lawn watering; routine external building wash down that does not use detergents or other compounds; pavement wash waters where spills or leaks of toxic or hazardous materials (including oils and fuels) have not occurred (unless all spilled material has been removed) and where detergents are not used; air conditioning condensate; uncontaminated compressor condensate; uncontaminated springs; uncontaminated ground water; incidental windblown mist from cooling towers that is not intentionally discharged (e.g. piped cooling tower blowdown); and foundation or footing drains where flows are not contaminated with process materials such as solvents.

For administrative reasons the permit sectors were broken out into five groups. Although the permit is
designed and structured to allow coverage for any sector, it is the intention of DWQ to primarily provide
coverage only for discharges from the inclusive sectors of Group 2 under this permit section renewal for Group
2 (Sectors I, R, AB, AC).

**MSGP GROUP 2 COVERAGE:**
MSGP Group 2 covers facilities where the primary industrial activity is from Sectors I, R, AB, and AC, Storm
Water Discharges Associated with Industrial Activity from Oil or Gas Facilities, Ship or Boat Building
Facilities, Facilities that Manufacture Transportation Equipment, Industrial or Commercial Machinery, and
Facilities that Manufacture Electronic and Electrical Equipment and Components, Photographic and Optical
Goods. Other industrial activities at a facility that are covered under a MSGP Group 2 permit but are classified
in other Sectors may be covered by this permit if the other activity is secondary to the activities of the Sectors
listed above. Sectors I, R, AB, and AC includes facilities under standard industrial classification codes 13,
2911, 35, 36, 37, and 38.

**SUMMARY OF CHANGES FROM PREVIOUS PERMIT SECTION:**
Below is a list of changes made to the 2015 version of the Group 2 section of the MSGP. Changes apply to all
Sectors within Group 2 unless specifically identified by Sector.

1) The deadline for facilities that filed for a NOI prior to January 1, 1998 to submit a Failure to Certify
   has been removed since the deadline has passed and is no longer applicable.

2) The exemption to identify fire fighting activities as a non-storm water discharge has been updated to
   specify that only “emergency” fire fighting activities are exempt.

3) Minor grammatical, wording, and format modifications.

4) Sector I – The weekly inspection requirement for erosion controls has been changed to allow the
   option of inspecting every seven (7) calendar days or every 14 calendar days and within 24 hours of a
   storm event of 0.5 inches or greater. This new requirement matches the Construction Storm Water
   General Permit requirements for erosion control inspections.

**PERMIT CONDITIONS:**
The strategy for storm water permitting is to focus on source control rather than, but not precluding, traditional
end of pipe treatment. The major portion of this permit requires a pollution prevention plan to be designed by
the facility to accomplish the following:

1) Identify personnel for a pollution prevention team, responsible for developing the pollution
   prevention plan and assisting the facility or manager in its implementation, maintenance, and
   revision.

2) Identify and describe potential storm water pollution sources. Steps to accomplish this are
   listed below:
   a) Develop site maps showing drainage, structural controls, spill areas, areas with
      pollution risks, areas with erosion risks, and water bodies;
   b) Generate and maintain an inventory of exposed materials;
c) List times and locations of significant spills or leaks of toxic or hazardous pollutants;
d) Certify that there are no non-storm water discharges except those allowed in the permit;
e) Evaluate the risks of storm water pollution on industrial activities that take place on site;

3) Identify and implement management and structural control measures to prevent storm water pollution. Steps to accomplish this are listed below:

a) Maintain good housekeeping;
b) Provide inspection and maintenance of storm water equipment;
c) Identify spill areas and provide material handling procedures, storage requirements, and clean up responses and equipment;
d) Provide training programs for employees affected by the pollution prevention plan;
e) Develop record keeping systems and reporting systems for inspections, reports, spills, and maintenance;
f) Develop plans to reduce erosion from storm water or the transport of sediment by storm water;
g) Develop a plan for the management of storm water considering the most effective use of traditional or source control storm water management systems.

4) Provide comprehensive site compliance evaluations.

5) Perform visual monitoring of storm water runoff during storms that is representative of permitted areas of the site.

EFFLUENT LIMITATIONS:
Effluent limitations included in the permit are for coal pile runoff (if applicable). Coal pile runoff must maintain a pH in the range of 6.5 to 9.0 in accordance with secondary treatment standards (UAC R317-1-3.2), and must maintain a total suspended solids limit of 50 mg/L based on the limit given to steam electric power generating BAT's (40 CFR 423.12(b)(9)).

PERMIT DURATION: As stated in UAC R317-8-5.1(1), UPDES permits shall be effective for a fixed term not to exceed five (5) years. The permit language for these sectors is set to expire on December 31, 2023 to coincide with the expiration of the MSGP.

PUBLIC COMMENTS: UPDES permits are required to have a 30-day public comment period before issuance.

Began: November 29, 2019
Ended: December 30, 2019
Public Notification Publication: Deseret News & Salt Lake Tribune

No comments were received during this comment period.

This permit section and fact sheet was modified from the 2015 version. It was drafted by Lisa Stevens,
Industrial Program Coordinator, Utah Division of Water Quality on October 30, 2019.
