Utah Division of Water Quality
Statement of Basis
ADDENDUM
Wasteload Analysis and Antidegradation Level I Review

Date: **November 5, 2020**

Prepared by: **Suzan Tahir**
Standards and Technical Services

Facility: **Air Products Manufacturing Corp.**
UPDES No. UT- 0024210

Receiving water: **Stormwater Pipe→Stone Creek→ Farmington Bay WMA (2B, 3A, 4)**

This addendum summarizes the wasteload analysis that was performed to determine water quality based effluent limits (WQBEL) for this discharge. Wasteload analyses are performed to determine point source effluent limitations necessary to maintain designated beneficial uses by evaluating projected effects of discharge concentrations on in-stream water quality. The wasteload analysis also takes into account downstream designated uses (UAC R317-2-8). Projected concentrations are compared to numeric water quality standards to determine acceptability. The numeric criteria in this wasteload analysis may be modified by narrative criteria and other conditions determined by staff of the Division of Water Quality.

Discharge

Outfall 001: Stone Creek

The mean monthly design discharge is 0.065 MGD (0.101 cfs) for the facility.

Receiving Water
The receiving water for Outfall 001 is Stone Creek.

Per UAC R317-2-13.7(b), the designated beneficial uses for Stone Creek and tributaries, from Farmington Bay Waterfowl Management Area to U.S. National Forest Boundary is 2B, 3A and 4.

- *Class 2B - Protected for infrequent primary contact recreation. Also protected for secondary contact recreation where there is a low likelihood of ingestion of water or a low degree of bodily contact with the water. Examples include, but are not limited to, wading, hunting, and fishing.*

- *Class 3A -- Protected for cold water species of game fish and other cold water aquatic life, including the necessary aquatic organisms in their food chain*

- *Class 4 - Protected for agricultural uses including irrigation of crops and stock watering.*

Typically, the critical flow for the wasteload analysis is considered the lowest stream flow for seven consecutive days with a ten year return frequency (7Q10). Due to a lack of flow data, default values were used. In the previous permit cycle, Dave Walker (a certified stormwater engineer) estimated regular flows at 8 to 10 cfs and a low flow condition at 2 to 4 cfs. Therefore, 3.5 cfs was used as the 7Q10 flow. The estimated critical low flow values for each season are listed in Table 1.

Table 1. Seasonal Flow Values (estimated)

Season	7Q10 Flow Values (cfs)
Summer	3.5
Fall	3.5
Winter	3.5
Spring	3.5
Overall	8.0

The receiving water quality in Stone Creek was characterized using best professional judgement (as there was no ambient water quality data available).

TMDL

Stone Creek from Great Salt Lake to USFS boundary (UT16020102-046_00) is listed as impaired on the 2016 303(d) list for *E*.coli, pH, copper and temperature.

Mixing Zone

The maximum allowable mixing zone is 15 minutes of travel time for acute conditions, not to exceed 50% of stream width, and 2,500 feet for chronic conditions, per UAC R317-2-5. Water quality standards must be met at the end of the mixing zone.

The mixing zone analysis shows the discharge to be fully mixed by the end of the mixing zone. Acute limits were calculated using 50% of the seasonal critical low flow.

Parameters of Concern

There were no potential parameters of concern identified for the discharge/receiving water based on a discussion and consultation with the UPDES Permit Writer.

WET Limits

The percent of effluent in the receiving water in a fully mixed condition, and acute and chronic dilution in a not fully mixed condition are calculated in the WLA in order to generate WET limits. The LC_{50} (lethal concentration, 50%) percent effluent for acute toxicity and the IC_{25} (inhibition concentration, 25%) (Table 2) percent effluent for chronic toxicity, as determined by

the WET test, needs to be below the WET limits, as determined by the WLA. The WET limit for LC_{50} is typically 100% effluent and does not need to be determined by the WLA.

Table 2. WET Limits for IC_{25}

Outfall	Percent Effluent
Outfall 001	2.8 %

Wasteload Allocation Methods

Effluent limits were determined for conservative constituents using a simple mass balance mixing analysis (UDWQ 2012). The mass balance analysis is summarized in the Wasteload Addendum.

The water quality standard for chronic ammonia toxicity is dependent on temperature and pH, and the water quality standard for acute ammonia toxicity is dependent on pH. The AMMTOX Model developed by University of Colorado and adapted by Utah DWQ and EPA Region VIII was used to determine ammonia effluent limits (Lewis et al. 2002). The analysis is summarized in the Wasteload Addendum.

Models and supporting documentation are available for review upon request.

Antidegradation Level I Review

The objective of the Level I ADR is to ensure the protection of existing uses, defined as the beneficial uses attained in the receiving water on or after November 28, 1975. No evidence is known that the existing uses deviate from the designated beneficial uses for the receiving water. Therefore, the beneficial uses will be protected if the discharge remains below the WQBELs presented in this wasteload.

A Level II Antidegradation Review (ADR) is not required for this facility.

WASTELOAD ANALYSIS [WLA]
Addendum: Statement of Basis

23-Oct-20
4:00 PM

Facilities: **Air Products** **UPDES No: UT-0024210**
Discharging to: **Stormwater Pipe => Stone Ck.=>Farmington Bay WMA**

I. Introduction

Wasteload analyses are performed to determine point source effluent limitations necessary to maintain designated beneficial uses by evaluating projected effects of discharge concentrations on in-stream water quality. The wasteload analysis also takes into account downstream designated uses [R317-2-8, UAC]. Projected concentrations are compared to numeric water quality standards to determine acceptability. The anti-degradation policy and procedures are also considered. The primary in-stream parameters of concern may include metals (as a function of hardness), total dissolved solids (TDS), total residual chlorine (TRC), un-ionized ammonia (as a function of pH and temperature, measured and evaluated interms of total ammonia), and dissolved oxygen.

Mathematical water quality modeling is employed to determine stream quality response to point source discharges. Models aid in the effort of anticipating stream quality at future effluent flows at critical environmental conditions (e.g., low stream flow, high temperature, high pH, etc).

The numeric criteria in this wasteload analysis may always be modified by narrative criteria and other conditions determined by staff of the Division of Water Quality.

II. Receiving Water and Stream Classification

Stormwater Pipe => Stone Ck.=>Farmingt	2B, 3A, 4
Antidegradation Review:	Antidegradation Level II Review is NOT Required

III. Numeric Stream Standards for Protection of Aquatic Wildlife

Total Ammonia (TNH3)	Varies as a function of Temperature and pH Rebound. See Water Quality Standards
Chronic Total Residual Chlorine (TRC)	0.011 mg/l (4 Day Average) 0.019 mg/l (1 Hour Average)
Chronic Dissolved Oxygen (DO)	6.50 mg/l (30 Day Average) 5.00 mg/l (7Day Average) 4.00 mg/l (1 Day Average
Maximum Total Dissolved Solids	1200.0 mg/l

There are additional standards that apply to this receiving water, but were not considered in this modeling/waste load allocation analysis.

VII. Mathematical Modeling of Stream Quality

Model configuration was accomplished utilizing standard modeling procedures. Data points were plotted and coefficients adjusted as required to match observed data as closely as possible.

The modeling approach used in this analysis included one or a combination of the following models.

(1) The Utah River Model, Utah Division of Water Quality, 1992. Based upon STREAMDO IV (Region VIII) and Supplemental Ammonia Toxicity Models; EPA Region VIII, Sept. 1990 and QUAL2E (EPA, Athens, GA).

(2) Utah Ammonia/Chlorine Model, Utah Division of Water Quality, 1992.

(3) AMMTOX Model, University of Colorado, Center of Limnology, and EPA Region 8

(4) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

Coefficients used in the model were based, in part, upon the following references:

(1) Rates, Constants, and Kinetics Formulations in Surface Water Quality Modeling. Environmental Research Laboratory, Office of Research and Development, U.S. Environmental Protection Agency, Athens Georgia. EPA/600/3-85/040 June 1985.

(2) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

VIII. Modeling Information

The required information for the model may include the following information for both the upstream conditions at low flow and the effluent conditions:

Flow, Q, (cfs or MGD)	D.O. mg/l
Temperature, Deg. C.	Total Residual Chlorine (TRC), mg/l
pH	Total NH3-N, mg/l

BOD5, mg/l — Total Dissolved Solids (TDS), mg/l
Metals, ug/l — Toxic Organics of Concern, ug/l

Other Conditions

In addition to the upstream and effluent conditions, the models require a variety of physical and biological coefficients and other technical information. In the process of actually establishing the permit limits for an effluent, values are used based upon the available data, model calibration, literature values, site visits and best professional judgement.

Model Inputs

The following is upstream and discharge information that was utilized as inputs for the analysis. Dry washes are considered to have an upstream flow equal to the flow of the discharge.

Current Upstream Information

	Stream Critical Low Flow	Temp.	pH	T-NH3	BOD5	DO	TRC	TDS
	cfs	Deg. C		mg/l as N	mg/l	mg/l	mg/l	mg/l

Projected Discharge Information

Season	Flow, MGD	Temp.	TDS mg/l	TDS tons/day
Summer	0.06500	22.2	1729.49	0.46868
Fall	0.06500	12.2		
Winter	0.06500	7.9		
Spring	0.06500	16.9		

All model numerical inputs, intermediate calculations, outputs and graphs are available for discussion, inspection and copy at the Division of Water Quality.

IX. Effluent Limitations

Current State water quality standards are required to be met under a variety of conditions including in-stream flows targeted to the 7-day, 10-year low flow (R317-2-9).

Other conditions used in the modeling effort coincide with the environmental conditions expected at low stream flows.

Effluent Limitation for Flow based upon Water Quality Standards

In-stream criteria of downstream segments will be met with an effluent flow maximum value as follows:

Season	Daily Average	
Summer	0.065 MGD	0.101 cfs
Fall	0.065 MGD	0.101 cfs
Winter	0.065 MGD	0.101 cfs
Spring	0.065 MGD	0.101 cfs

Flow Requirement or Loading Requirement

The calculations in this wasteload analysis utilize the maximum effluent discharge flow of 0.065 MGD. If the discharger is allowed to have a flow greater than 0.065 MGD during 7Q10 conditions, and effluent limit concentrations as indicated, then water quality standards will be violated. In order to prevent this from occuring, the permit writers must include the discharge flow limititation as indicated above; or, include loading effluent limits in the permit.

Effluent Limitation for Whole Effluent Toxicity (WET) based upon WET Policy

Effluent Toxicity will not occur in downstream segements if the values below are met.

WET Requirements	LC50 >	19.2%	Effluent	[Acute]
	IC25 >	2.8%	Effluent	[Chronic]

Effluent Limitation for Biological Oxygen Demand (BOD) based upon Water Quality Standards or Regulations

In-stream criteria of downstream segments for Dissolved Oxygen will be met with an effluent BOD limitation as follows:

Season	Concentration			
Summer	25.0	mg/l as BOD5	13.5	lbs/day
Fall	25.0	mg/l as BOD5	13.5	lbs/day
Winter	25.0	mg/l as BOD5	13.5	lbs/day
Spring	25.0	mg/l as BOD5	13.5	lbs/day

Effluent Limitation for Dissolved Oxygen (DO) based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Oxygen will be met with an effluent D.O. limitation as follows:

Season	**Concentration**
Summer	5.00
Fall	5.00
Winter	5.00
Spring	5.00

Effluent Limitation for Total Ammonia based upon Water Quality Standards

In-stream criteria of downstream segments for Total Ammonia will be met with an effluent limitation (expressed as Total Ammonia as N) as follows:

Season		**Concentration**		**Load**	
Summer	4 Day Avg. - Chronic	64.2	mg/l as N	34.8	lbs/day
	1 Hour Avg. - Acute	74.6	mg/l as N	40.4	lbs/day
Fall	4 Day Avg. - Chronic	79.0	mg/l as N	42.8	lbs/day
	1 Hour Avg. - Acute	71.8	mg/l as N	38.9	lbs/day
Winter	4 Day Avg. - Chronic	88.0	mg/l as N	47.7	lbs/day
	1 Hour Avg. - Acute	75.2	mg/l as N	40.8	lbs/day
Spring	4 Day Avg. - Chronic	79.0	mg/l as N	0.0	lbs/day
	1 Hour Avg. - Acute	71.8	mg/l as N	0.0	lbs/day

Acute limit calculated with an Acute Zone of Initial Dilution (ZID) to be equal to 50.%.

Effluent Limitation for Total Residual Chlorine based upon Water Quality Standards

In-stream criteria of downstream segments for Total Residual Chlorine will be met with an effluent limitation as follows:

Season		Concentration		Load	
Summer	4 Day Avg. - Chronic	0.390	mg/l	0.21	lbs/day
	1 Hour Avg. - Acute	0.348	mg/l	0.19	lbs/day
Fall	4 Day Avg. - Chronic	0.390	mg/l	0.21	lbs/day
	1 Hour Avg. - Acute	0.348	mg/l	0.19	lbs/day
Winter	4 Day Avg. - Chronic	0.390	mg/l	0.21	lbs/day
	1 Hour Avg. - Acute	0.348	mg/l	0.19	lbs/day
Spring	4 Day Avg. - Chronic	0.390	mg/l	0.00	lbs/day
	1 Hour Avg. - Acute	0.348	mg/l	0.00	lbs/day

Effluent Limitations for Total Dissolved Solids based upon Water Quality Standards

Season		Concentration		Load	
Summer	Maximum, Acute	22084.1	mg/l	5.98	tons/day
Fall	Maximum, Acute	22084.1	mg/l	5.98	tons/day
Winter	Maximum, Acute	22084.1	mg/l	5.98	tons/day
Spring	4 Day Avg. - Chronic	22084.1	mg/l	5.98	tons/day

Colorado Salinity Forum Limits — Determined by Permitting Section

Effluent Limitations for Total Recoverable Metals based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Metals will be met with an effluent limitation as follows (based upon a hardness of 206.84 mg/l):

	4 Day Average Concentration		Load		1 Hour Average Concentration		Load	
Aluminum	N/A		N/A		13,761.1	ug/l	7.5	lbs/day
Arsenic	6,775.62	ug/l	2.4	lbs/day	6,243.3	ug/l	3.4	lbs/day
Cadmium	13.84	ug/l	0.0	lbs/day	80.8	ug/l	0.0	lbs/day
Chromium III	5,568.33	ug/l	2.0	lbs/day	60,160.6	ug/l	32.6	lbs/day
Chromium VI	255.52	ug/l	0.1	lbs/day	225.3	ug/l	0.1	lbs/day
Copper	593.93	ug/l	0.2	lbs/day	497.1	ug/l	0.3	lbs/day
Iron	N/A		N/A		18,381.7	ug/l	10.0	lbs/day
Lead	259.68	ug/l	0.1	lbs/day	3,776.1	ug/l	2.0	lbs/day
Mercury	0.43	ug/l	0.0	lbs/day	44.2	ug/l	0.0	lbs/day
Nickel	3,426.61	ug/l	1.2	lbs/day	15,954.6	ug/l	8.6	lbs/day
Selenium	109.37	ug/l	0.0	lbs/day	340.4	ug/l	0.2	lbs/day
Silver	N/A	ug/l	N/A	lbs/day	243.1	ug/l	0.1	lbs/day
Zinc	7,939.08	ug/l	2.8	lbs/day	4,080.4	ug/l	2.2	lbs/day
Cyanide	186.20	ug/l	0.1	lbs/day	404.9	ug/l	0.2	lbs/day

Effluent Limitations for Heat/Temperature based upon Water Quality Standards

Summer	54.8 Deg. C.	130.7 Deg. F
Fall	48.8 Deg. C.	119.9 Deg. F
Winter	40.8 Deg. C.	105.5 Deg. F
Spring	48.8 Deg. C.	119.9 Deg. F

Effluent Limitations for Organics [Pesticides] Based upon Water Quality Standards

In-stream criteria of downstream segments for Organics [Pesticides] will be met with an effluent limit as follows:

	4 Day Average			1 Hour Average		
	Concentration		Load	Concentration		Load
Aldrin				1.5E+00	ug/l	1.26E-03 lbs/day
Chlordane	4.30E-03	ug/l	2.33E-03 lbs/day	1.2E+00	ug/l	1.01E-03 lbs/day

Utah Division of Water Quality
Salt Lake City, Utah

Effluent Targets for Pollution Indicators
Based upon Water Quality Standards

In-stream criteria of downstream segments for Pollution Indicators
will be met with an effluent limit as follows:

	1 Hour Average Concentration		Loading	
Gross Beta (pCi/l)	50.0	pCi/L		
BOD (mg/l)	5.0	mg/l	2.7	lbs/day
Nitrates as N	4.0	mg/l	2.2	lbs/day
Total Phosphorus as P	0.05	mg/l	0.0	lbs/day
Total Suspended Solids	90.0	mg/l	48.8	lbs/day

Note: Pollution indicator targets are for information purposes only.

Effluent Limitations for Protection of Human Health [Toxics Rule]
Based upon Water Quality Standards (Most stringent of 1C or 3A & 3B as appropriate.)

In-stream criteria of downstream segments for Protection of Human Health [Toxics]
will be met with an effluent limit as follows:

	Maximum Concentration Concentration		Load	
Toxic Organics				
Acenaphthene	9.67E+04	ug/l	5.24E+01	lbs/day

Summary Effluent Limitations for Metals [Wasteload Allocation, TMDL]

[If Acute is more stringent than Chronic, then the Chronic takes on the Acute value.]

	WLA Acute ug/l	WLA Chronic ug/l	
Aluminum	13761.1	N/A	
Antimony	153969.34		
Arsenic	3580.7	6775.6	Acute Controls
Asbestos	0.00E+00		
Barium			
Beryllium			
Cadmium	80.8	13.8	
Chromium (III)	60160.6	5568	
Chromium (VI)	225.3	255.5	Acute Controls
Copper	497.1	593.9	Acute Controls
Cyanide	404.9	186.2	
Iron	18381.7		
Lead	3553.0	259.7	
Mercury	5.371	0.429	
Nickel	15954.6	3427	
Selenium	340.4	109.4	
Silver	243.1	N/A	
Thallium	225.6		
Zinc	4080.4	7939.1	Acute Controls
Boron	26855.12		

Other Effluent Limitations are based upon R317-1.

E. coli	126.0	organisms per 100 ml

X. Antidegradation Considerations

The Utah Antidegradation Policy allows for degradation of existing quality where it is determined that such lowering of water quality is necessary to accommodate important economic or social development in the area in which the waters are protected [R317-2-3]. It has been determined that certain chemical parameters introduced by this discharge will cause an increase of the concentration of said parameters in the receiving waters. Under no conditions will the increase in concentration be allowed to interfere with existing instream water uses.

The antidegradation rules and procedures allow for modification of effluent limits less than those based strictly upon mass balance equations utilizing 100% of the assimilative capacity of the receiving water. Additional factors include considerations for "Blue-ribbon" fisheries, special recreational areas, threatened and endangered species, and drinking water sources.

An Antidegradation Level I Review was conducted on this discharge and its effect on the receiving water. Based upon that review, it has been determined that an
Antidegradation Level II Review is NOT Required

XI. Colorado River Salinity Forum Considerations

Discharges in the Colorado River Basin are required to have their discharge at a TDS loading of less than 1.00 tons/day unless certain exemptions apply. Refer to the Forum's Guidelines for additional information allowing for an exceedence of this value.
This doesn’t apply to facilities that do not discharge to the Colorado River Basin.

XII. Summary Comments

The mathematical modeling and best professional judgement indicate that violations of receiving water beneficial uses with their associated water quality standards, including important down-stream segments, will not occur for the evaluated parameters of concern as discussed above if the effluent limitations indicated above are met.

XIII. Notice of UPDES Requirement

This Addendum to the Statement of Basis does not authorize any entity or party to discharge to the waters of the State of Utah. That authority is granted through a UPDES permit issued by the Utah Division of Water Quality. The numbers presented here may be changed as a function of other factors. Dischargers are strongly urged to contact the Permits Section for further information. Permit writers may utilize other information to adjust these limits and/or to determine other limits based upon best available technology and other considerations provided that the values in this wasteload analysis [TMDL] are not compromised. See special provisions in Utah Water Quality Standards for adjustments in the Total Dissolved Solids values based upon background concentration.

Level I Antidegradation Review for: Air Products

AirProducts_WLA_2020.xls

An antidegradation review (ADR) was conducted to determine whether the proposed activity complies with the applicable antidegradation requirements for receiving waters that may be affected. The Level I ADR found that the proposed activity meets the requirements of R317-2-3.5(b)(1) (water quality will not be lowered by the proposed activity) and, therefore does not require a Level II review. The proposed activity is a basic permit renewal. No increase in effluent concentration or load is requested over that allowed under the current UPDES Permit.
