BACKGROUND INFORMATION

The Anderson Geneva Development, Inc. facility (AGD) is a former integrated steel mill located in the town of Vineyard, Utah, just east of Utah Lake in Utah County. As of June 2010, the steel making machinery has been dismantled and removed off site, and all of the buildings and other structures on the property have been demolished. AGD's ongoing operations during redevelopment of the property falls under two Standard Industrial Classification (SIC) Codes: 4953 – *Refuse Systems* and 5093 – *Scrap and Waste Materials*. Storm water and intercepted ground water from AGD is discharged from a concrete culvert inlet structure into the northeast side of a large retention pond, which ultimately discharges to Utah Lake through a 1500 foot long, 24-inch diameter diffuser with 20, 6" portals extending west from the retention pond out into Utah Lake. This UPDES renewal permit will once again authorize discharges from AGD during the next five years.
