NO DISCHARGE CERTIFICATION FORM

for Exclusion from the Industrial Storm Water Permit (1-23)

STATE OF UTAH, DEPARTMENT OF ENVIRONMENTAL QUALITY, DIVISION OF WATER QUALITY

195 North 1950 West, P.O. BOX 144870, SALT LAKE CITY, UTAH 84114-4870

Industrial facilities required to comply with the Utah Pollutant Discharge Elimination System (UPDES) requirements include mines (including gravel pits), cement plants, wood mills, airports, scrap yards, trucking yards, bulk fueling stations, and other manufacturing facilities. Coverage is required for facilities that operate under qualifying Standard Industrial Classification (SIC) Codes found in Appendix I of the Multi-Sector General Permit on the Division of Water Quality's website at http:// waterquality.utah.gov.

An industrial facility with a SIC code that requires coverage but does not discharge storm water to waters of the state may formally opt for an exclusion. By definition, a discharge to waters of the state includes discharges to surface water or groundwater (UAC R317-8-1.5(59)). A no discharge exclusion is obtained by completing and submitting this form with appropriate supporting documentation to demonstrate that no storm water can discharge from the site via surface runoff or sub-surface infiltration. This exclusion is available on a facility-wide basis only and is not applicable to individual outfalls.

A no discharge exclusion cannot be obtained if the facility discharges storm water, even if storm water is not exposed to industrial materials or activities. In this situation a No Exposure Certification form may be appropriate.

The form is non-transferable. If a new operator takes over the facility, the new operator must complete and submit a new form to claim no discharge.
